Health and Welfare

# 2005 Idaho Vital Statistics

Bureau of Health Policy  
and Vital Statistics

Special thanks go to Patricia Herman with the Idaho Secretary of State's Office for providing the county seals. Each county seal represents the uniqueness of the county and is placed on the map where the county is located in Idaho. Special thanks also go to Jeff Harder of Boise, Idaho, for his excellent artwork and his design of the cover and divider pages.

For more information on this report or other vital statistics, please contact the Bureau of Health Policy and Vital Statistics at (208) 334-5977. This report and other reports from the Bureau of Health Policy and Vital Statistics are available on the web at [www.healthandwelfare.idaho.gov](http://www.healthandwelfare.idaho.gov) under Health Statistics.

<b>DEFINITIONS AND FORMULAS .....</b>	vi
<b>POPULATION.....</b>	1
July 1, 2004-2005 population estimates, 1990 and 2000 census, and percent change ( <i>U.S., states</i> ).....	2
July 1, 2003-2005 population estimates, 1980, 1990, and 2000 census, and percent change ( <i>Idaho, districts, counties</i> ).....	3
July 1, 2005 population estimates, 1990 and 2000 census, and percent change ( <i>cities</i> ) .....	5
July 1, 2005 population estimates by race/ethnicity ( <i>Idaho, districts, counties</i> ) .....	9
July 1, 2005 population estimates by race by ethnicity ( <i>Idaho, districts, counties</i> ) .....	10
July 1, 2005 population estimates by age by race/ethnicity ( <i>Idaho</i> ) .....	11
July 1, 2005 population estimates by age and sex ( <i>Idaho, districts, counties</i> ).....	12
July 1, 2005 population estimates by single years of age and sex ( <i>Idaho</i> ) .....	16
<b>TRENDS AND SUMMARY .....</b>	17
Idaho vital statistics, 1996-2005 .....	18
Summary of 2005 births, deaths, marriages, divorces ( <i>U.S., Idaho, districts, counties</i> ) .....	20
Summary of 2005 infant, fetal, perinatal mortality ( <i>U.S., Idaho, districts, counties</i> ) .....	21
Live births, number and rate, 1922-2005.....	22
Teen pregnancies, number and rate by age, 1996-2005 .....	23
Teen live births, number and rate by age, 1996-2005.....	23
Deaths, number and rate, 1922-2005.....	24
Marriage and divorces, number and rate, 1952-2005 .....	25
Idaho vital events, 2005.....	26
<b>NATALITY.....</b>	27
Live births and rates, 2001-2005 ( <i>U.S., Idaho, districts, counties</i> ).....	32
2005 Live births: sex and race/ethnicity ( <i>Idaho, districts, counties</i> ) .....	33
2005 Live births: age of mother ( <i>Idaho, districts, counties</i> ).....	34
2005 Live births: education of mother ( <i>Idaho, districts, counties</i> ) .....	35
2005 Live births: attendant at birth ( <i>Idaho, districts, counties</i> ) .....	36
2005 Live births: place of birth ( <i>Idaho, districts, counties</i> ).....	37
2005 Live births: birth and fertility rates ( <i>U.S., Idaho, districts, counties</i> ).....	38
2005 Live births: live birth order by age of mother .....	39
2005 Live births: fertility and age-specific rates ( <i>U.S., Idaho</i> ) .....	39
<i>Prenatal care</i> .....	40
2005 Live births: prenatal care by mother's characteristics.....	41
2005 Live births: trimester when prenatal care began ( <i>Idaho, districts, counties</i> ).....	42
2005 Live births: APNCU Index of prenatal care ( <i>Idaho, districts, counties</i> ).....	43
2005 Low birth weight live births: weight at birth ( <i>U.S., Idaho, districts, counties</i> ).....	44
2005 Low birth weight live births: race/ethnicity of mother ( <i>Idaho, districts, counties</i> ).....	45
2005 Low birth weight live births: age of mother ( <i>Idaho, districts, counties</i> ) .....	46
2005 Low birth weight live births: live birth order by age of mother.....	47
2005 Low birth weight live births: age-specific percents ( <i>U.S., Idaho</i> ).....	47
2005 Live births: gestational age in weeks ( <i>Idaho, districts</i> ) .....	48
2005 Live births: gestational age by plurality.....	48
2005 Live births: birth weight by plurality.....	48
2005 Live births: Apgar scores .....	49
2005 Live births: WIC participation, infant breastfed ( <i>Idaho, districts</i> ) .....	49
<i>Out-of-wedlock live births</i> .....	50
2005 Out-of-wedlock live births: race/ethnicity of mother ( <i>Idaho, districts, counties</i> ).....	52
2005 Out-of-wedlock live births: age of mother ( <i>Idaho, districts, counties</i> ).....	53

## TABLE OF CONTENTS (CONTINUED)

2005 Out-of-wedlock live births: live birth order by age of mother .....	54
2005 Out-of-wedlock live births: age-specific percents ( <i>U.S., Idaho</i> ) .....	54
2005 Live births: risk factors, infections present and/or treated during pregnancy by age of mother .....	55
2005 Live births: risk factors, infections present and/or treated during pregnancy .....	55
2005 Live births: maternal morbidity (complications), characteristics of labor and delivery by age of mother .....	56
2005 Live births: maternal morbidity (complications), characteristics of labor and delivery.....	56
2005 Live births: abnormal conditions of the newborn, congenital anomalies .....	57
2005 Live births: cigarette smoking by age of mother.....	58
2005 Live births: cigarette smoking by race and ethnicity of mother .....	58
2005 Live births: cigarette smoking before and during pregnancy by trimester ( <i>Idaho, districts</i> ) ....	59
2005 Live births: cigarette smoking by birth weight .....	59
2005 Live births: method of delivery ( <i>U.S., Idaho, districts</i> ).....	60
2005 Live births: method of delivery by age of mother .....	60
2005 Live births: main payment source for delivery ( <i>Idaho, districts</i> ) .....	61
2005 Live births: main payment source for delivery by age of mother.....	61
2005 Teen pregnancy: fertility rates, percent out-of-wedlock, percent low birth weight by age ( <i>U.S., Idaho</i> ).....	62
2005 Teen pregnancy: pregnancy rates, abortion rates and ratios by age .....	62
2005 Teen pregnancy: total pregnancies and rates by age of mother ( <i>Idaho, districts, counties</i> )...	65
2005 Teen live births: age of mother ( <i>Idaho, districts, counties</i> ).....	66
2005 Teen live births: out-of-wedlock percents by age of mother ( <i>Idaho, districts, counties</i> ) .....	67
2005 Teen live births: low birth weight percents by age of mother ( <i>Idaho, districts, counties</i> ) .....	68
2005 Teen abortions: abortions, ratios and rates by age of patient ( <i>Idaho, districts, counties</i> ) .....	69
Most common given names and selected unique names, 2005 .....	70
<b>MORTALITY</b> .....	71
Deaths and rates, 2001-2005 ( <i>U.S., Idaho, districts, counties</i> ).....	73
2005 Deaths: sex and race/ethnicity ( <i>Idaho, districts, counties</i> ).....	74
2005 Deaths: age at death ( <i>Idaho, districts, counties</i> ).....	75
2005 Deaths: ten leading causes, percent of deaths, crude rates and age-adjusted rates ( <i>U.S., Idaho</i> ).....	76
2005 Deaths: ten leading causes by sex, percent of deaths, crude rates and age-adjusted rates ( <i>U.S., Idaho</i> ).....	77
2005 Deaths: ten leading causes by age groups .....	78
2005 Deaths: ten leading causes of premature deaths, total and by sex, based on years of potential life lost before age 75 .....	79
2005 Deaths: life expectancy, by sex ( <i>Idaho, districts</i> ) .....	80
2005 Deaths: malignant neoplasms ( <i>Idaho, districts, counties</i> ).....	81
2005 Deaths: primary site of malignant neoplasms by sex .....	82
2005 Deaths: selected causes ( <i>Idaho, districts, counties</i> ).....	84
2005 Deaths: 113 selected causes by age .....	86
2005 Deaths: accidental deaths by age .....	92
2005 Deaths: accidental deaths by place of injury, accident type and age.....	96
2005 Deaths: work injury deaths occurring in Idaho by manner, sex and age.....	97
2005 Deaths: accidental work injury deaths occurring in Idaho by industry and place of injury .....	97
2005 Deaths: firearm injury, alcohol-induced, and drug-induced deaths ( <i>U.S., Idaho, districts</i> ) by age and sex ( <i>Idaho</i> ) and years potential life lost before age 75.....	98
2005 Deaths: disposition method ( <i>Idaho, districts, counties</i> ).....	99
<i>Infant, fetal, and maternal mortality</i> .....	100
Infant deaths and rates, 2001-2005 ( <i>U.S., Idaho, districts, counties</i> ) .....	103

## TABLE OF CONTENTS (CONTINUED)

2005 Infant deaths: causes of death, neonatal and postneonatal .....	105
2005 Infant deaths and rates: age of mother .....	105
2003-2005 Infant deaths: causes of death ( <i>Idaho, districts, counties</i> ) .....	106
2005 Infant deaths: neonatal, postneonatal ( <i>U.S., Idaho, districts, counties</i> ) .....	107
Infant mortality: three-year rates, 1994-1996 through 2003-2005 ( <i>Idaho, districts, counties</i> ) .....	108
Stillbirths and ratios, 2001-2005 ( <i>Idaho, districts, counties</i> ) .....	109
Perinatal deaths and ratios, 2001-2005 ( <i>Idaho, districts, counties</i> ) .....	110
<b>INDUCED ABORTION</b> .....	111
2005 Induced abortions in Idaho and to Idaho residents ( <i>Idaho, districts, counties</i> ) .....	112
2005 Induced abortions to Idaho residents: ratios and race/ethnicity ( <i>Idaho, districts, counties</i> ) ...	113
2005 Induced abortions to Idaho residents: age ( <i>Idaho, districts, counties</i> ) .....	114
2005 Induced abortions in Idaho: procedure by length of gestation .....	115
2005 Induced abortions in Idaho: procedure by complications .....	115
2005 Induced abortions in Idaho: age of patient by marital status .....	116
2005 Induced abortions in Idaho: previous abortions, living children .....	116
<b>MARRIAGE AND DIVORCE</b> .....	117
Marriages, 1996-2005 ( <i>Idaho, districts, counties</i> ) .....	118
2005 Marriages: age of groom by age of bride .....	119
2005 Marriages: race/ethnicity of groom by race/ethnicity of bride .....	119
2005 Marriages: age of bride by previous marital status .....	120
2005 Marriages: age of groom by previous marital status .....	120
2005 Marriages: occurrence by Idaho residence ( <i>Idaho, districts, counties</i> ) .....	121
Divorces, 1996-2005 ( <i>Idaho, districts, counties, tribal courts</i> ) .....	122
2005 Divorces: number this marriage (husband, wife) .....	123
Divorces, 2003-2005: duration of marriage .....	123
2005 Divorces: number of children <18 years of age in household .....	124
2005 Divorces: legal grounds .....	124
2005 Divorces: occurrence by Idaho residence ( <i>Idaho, districts, counties, tribal courts</i> ) .....	125
<b>DISTRICT AND COUNTY PROFILE</b> .....	127
Counties comprising Idaho public health districts .....	127
2005 Vital statistics profile of Idaho by district and county .....	128
<b>TECHNICAL NOTES</b> .....	135
Nativity .....	135
Mortality .....	144
Population .....	149

## DEFINITIONS AND FORMULAS

**RESIDENCE DATA** -- data allocated by place of residence of the registrant, or by place of residence of the infant's mother (births, stillbirths)

**OCCURRENCE DATA** -- data allocated by place where event occurred, regardless of the person's place of residence

**LIVE BIRTH** -- a birth that shows any sign of life after delivery

(CRUDE) BIRTH RATE -- number of live births per 1,000 population

$$\frac{\text{live births}}{\text{population}} \times 1,000$$

FERTILITY RATE -- number of live births per 1,000 women 15-44 years of age

$$\frac{\text{live births}}{\text{females 15-44}} \times 1,000$$

**OUT-OF-WEDLOCK BIRTH** -- a live birth to a woman who was not married at conception, birth, or anytime between

OUT-OF-WEDLOCK RATE (percent) -- number of out-of-wedlock live births per 100 live births

$$\frac{\text{out-of-wedlock live births}}{\text{live births}} \times 100$$

**LOW BIRTH WEIGHT** -- a live birth weighing under 2,500 grams (5 ½ pounds or less)

LOW BIRTH WEIGHT RATE (percent) -- number of low birth weight live births per 100 live births with stated birth weight

$$\frac{\text{low birth weight live births}}{\text{live births with stated birth weight}} \times 100$$

**STILLBIRTH** -- a spontaneous fetal death of at least 20 weeks gestation or a weight of at least 350 grams (does not include any induced abortions)

STILLBIRTH RATIO -- number of stillbirths per 1,000 live births

$$\frac{\text{stillbirths}}{\text{live births}} \times 1,000$$

**INFANT DEATH** -- death of an infant under 1 year of age

INFANT MORTALITY RATE -- number of infant deaths per 1,000 live births

$$\frac{\text{infant deaths}}{\text{live births}} \times 1,000$$

**NEONATAL DEATH** -- death of an infant within the first 27 days of life

NEONATAL MORTALITY RATE -- number of neonatal deaths per 1,000 live births

$$\frac{\text{neonatal deaths}}{\text{live births}} \times 1,000$$

**POSTNEONATAL DEATH** -- death of an infant 28 days through 11 months of life

POSTNEONATAL MORTALITY RATE -- number of postneonatal deaths per 1,000 live births

$$\frac{\text{postneonatal}}{\text{live births}} \times 1,000$$

## DEFINITIONS AND FORMULAS (continued)

**PERINATAL DEATH** -- includes stillbirths and deaths of infants within the first 6 days of life

PERINATAL MORTALITY RATIO -- number of perinatal deaths per 1,000 live births

$$\frac{\text{perinatal deaths}}{\text{live births}} \times 1,000$$

**MATERNAL DEATH** -- death attributable to complications of pregnancy, childbirth, or the puerperium based on ICD-10 codes A34, O00-O95, and O98-O99.

MATERNAL MORTALITY RATE -- number of maternal deaths per 100,000 live births

$$\frac{\text{maternal deaths}}{\text{live births}} \times 100,000$$

**(CRUDE) DEATH RATE** -- number of deaths per 1,000 population

$$\frac{\text{deaths}}{\text{population}} \times 1,000$$

**CAUSE-SPECIFIC DEATH RATE** -- number of deaths from a specific cause per 100,000 population

$$\frac{\text{deaths from specific cause}}{\text{population}} \times 100,000$$

**AGE-ADJUSTED DEATH RATE (DIRECT METHOD)** -- number of deaths per 100,000 standard population. Age-adjusted death rates are artificial measurements and should be used only to compare to other age-adjusted death rates calculated using the same standard population. Idaho and U.S. age-adjusted rates shown were calculated using the 2000 population estimate as the standard population.

$$\frac{\text{sum of (age-specific death rates per 100,000 for selected population} \times \text{standard population in corresponding age groups)}}{\text{sum of standard population}}$$

**INDUCED ABORTION** -- a legal medical procedure that is intended to terminate a pregnancy without a live birth

INDUCED ABORTION RATE -- number of induced abortions per 1,000 females 15-44 years of age

$$\frac{\text{induced abortions}}{\text{females 15-44}} \times 1,000$$

INDUCED ABORTION RATIO -- number of induced abortions per 1,000 live births

$$\frac{\text{induced abortions}}{\text{live births}} \times 1,000$$

## DEFINITIONS AND FORMULAS (continued)

In this publication, there are references to preliminary and provisional U.S. data. If the U.S. statistics are not noted as preliminary or provisional, they are considered final. The following definitions have been added to clarify the differences among the three types of U.S. data.

### U.S. Provisional Data

Prior to 1996, the National Center for Health Statistics (NCHS) released U.S. vital data and rates in two basic forms: provisional and final. Provisional data are based on monthly summary counts of birth, death, marriage, and divorce records received in state vital registration offices. Rates for 12-month periods, January through December, are the sum of events for the period per population estimated at the midpoint of the period. Provisional divorce rates are based on 46 reporting states and the District of Columbia; populations have been estimated by NCHS for the 12-month divorce rates based on these reporting states. The 2005 U.S. marriage and divorce, and select death and infant death rates in this publication are provisional measures. Final data for 2005 may differ from the provisional estimates.

### U.S. Preliminary Data

In 1996, the National Center for Health Statistics (NCHS) introduced a new statistical series for births and deaths: preliminary vital data. Preliminary vital data are based on a continuous flow of records received and processed by NCHS by a specified date (May 31, 2006, for births in 2005<sup>1</sup> and September 12, 2005 for deaths in 2004<sup>2</sup>). For live births, these records represent 99.2 percent of the births that occurred in the United States during 2005. For deaths, this comprises approximately 90 percent of death records. To develop the preliminary U.S. birth and death estimates, the records were weighted using independent control counts of births and deaths, registered in state vital statistics offices during calendar year 2005. The U.S. birth and death data in this publication are 2005 preliminary measures where available. Final birth and death statistics for 2005 may differ from the preliminary estimates.

### U.S. Final Data

Final U.S. vital statistics are based on events in the 50 states and the District of Columbia. The National Center for Health Statistics believes that more than 99 percent of the births and deaths occurring in this country are registered through the state vital registration system.<sup>3,4,5</sup> U.S. 2004 final death data provided in the Health E-Stats report were limited to select tables on leading cause of death. Where 2005 preliminary and 2004 final death data are not available, 2003 U.S. data are shown.

1. "Births: Preliminary Data for 2005," National Vital Statistics Reports, National Center for Health Statistics, Health E-Stats, Released November 21, 2006.
2. "Deaths: Preliminary Data for 2004," National Vital Statistics Reports, National Center for Health Statistics, Vol. 54, No. 19, June 28, 2006.
3. "Deaths: Final Data for 2003," National Vital Statistics Reports, National Center for Health Statistics, Vol. 54, No. 13, April 19, 2005.
4. "Births: Final Data for 2004," National Vital Statistics Reports, National Center for Health Statistics, Vol. 55, No. 1, September 29, 2006.
5. "Deaths: Final Data for 2004," National Vital Statistics Reports, National Center for Health Statistics, Health E-Stats, Released November 24, 2006.

## **VITAL REGISTRATION AND DATA COLLECTION**

The Idaho Bureau of Health Policy and Vital Statistics is responsible for managing Idaho's vital records program, and for providing health statistics and analysis. Civil laws of every state provide for a continuous, permanent, and compulsory vital registration system. Idaho is responsible for inspecting each Idaho state record for promptness of filing, completeness, and accuracy of information; querying for missing or inconsistent information; numbering the records; preparing indexes; processing the records; issuing certified copies; and storing the documents for permanent reference and safekeeping.

### **Births, Deaths, and Stillbirths**

Registration of births, deaths, and stillbirths is a legal requirement. The attending physician, midwife, or parent must file the birth certificate with the local registrar within 15 days of the birth. Most certificates of births occurring at Idaho hospitals are filed electronically. Death certificates are usually completed by physicians, coroners, and funeral directors. The certificate must be filed with the county's local registrar within five days from the date of death. A stillbirth certificate must be filed for all spontaneous fetal deaths of at least 20 weeks gestation or with a weight of at least 350 grams.

Unless otherwise stated, birth, death, and stillbirth data contained in this report are provided for Idaho residents, regardless of where the event occurred. There is an agreement among all registration areas in the United States for resident exchange of copies of birth, death, and stillbirth certificates.

### **Marriages and Divorces**

Idaho vital statistics law makes marriages and divorces occurring in Idaho reportable events. Marriages are registered with the county recorder in the county where the license was issued; divorces are filed with the clerk of the court where the divorce was granted. These records are then forwarded to the Bureau of Health Policy and Vital Statistics. There is no agreement among states to exchange certificates of resident marriages or divorces that occur out of state. Marriage and divorce data provided in this annual report are based on events occurring in Idaho, regardless of the party's residence.

### **Induced Abortions**

The reporting of induced abortions occurring in Idaho has been required by state statute since July 1, 1977. The Bureau of Health Policy and Vital Statistics began collecting abortion data in July 1977, with 1978 the first full year for which abortion statistics are available. In 1984, an interstate data exchange program for abortion data was initiated nationwide, whereby Idaho obtains non-identifying information about abortions occurring to Idaho residents in other states. Data in this report are provided for both Idaho residents and abortions occurring in Idaho.

## POPULATION

State and county 2005 postcensal estimates became available from the U.S. Bureau of the Census in March of 2006. Since the 2000 Census, Idaho's population increased by 135,143 (10.4 percent) from 1,293,953 in 2000 to 1,429,096 in 2005. From 2000 to 2005, the Mountain states (Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming) experienced a higher growth rate than any other region. In the Mountain region, Nevada (20.8 percent), Arizona (15.8 percent), and Utah (10.6 percent) experienced a higher growth rate than Idaho's 10.4 percent.

Idaho counties that experienced the largest percentage increases from April 1, 2000, to July 1, 2005, were Canyon, Teton, Kootenai, and Ada. Numerically, Ada, Canyon, Kootenai, and Bonneville gained the most population. Clark, Clearwater, Custer, and Minidoka reflected the greatest percentage decreases. Numerically, Minidoka, Shoshone, Clearwater, and Elmore experienced the greatest losses in population from 2000 to 2005.

### Change, April 1, 2000 to July 1, 2005

<u>County</u>	<u>Percent Change</u>	<u>County</u>	<u>Numeric Change</u>
Canyon	+25.2%	Ada	+43,823
Teton	24.5	Canyon	33,152
Kootenai	17.5	Kootenai	18,983
Ada	14.6	Bonneville	9,334
Clark	-7.7	Minidoka	-1,160
Clearwater	-6.2	Shoshone	-614
Custer	-6.1	Clearwater	-557
Minidoka	-5.7	Elmore	-496

The National Center for Health Statistics contracts with the U.S. Census Bureau to develop and disseminate detailed population estimates for the states. These population estimates include "bridged" race data in which multiple race estimates are allocated to a single race. Estimates are available by county, race, ethnic origin, age, and by sex. From 2000 to 2005, Idaho population for whites increased by 127,502 (10.2 percent), blacks by 3,475 (45.8 percent), Native Americans by 1,251 (6.1 percent), and Asians and Pacific Islanders by 2,915 (19.1 percent). Persons of Hispanic ethnicity may be of any race and are included in the appropriate race totals. The Hispanic population increased 27.7 percent from 101,690 in 2000 to 129,880 in 2005.

Of the Idaho cities with at least 1,000 population in 2000, the highest growth rates in the past five years were in Kuna (+88.6 percent), Ammon (+76.6 percent), Eagle (+56.4 percent), Rexburg (+52.2 percent), and Meridian (+49.6 percent). Cities under 1,000 in 2000 with highest growth rates were Victor (+62.5 percent), Dover (+40.1 percent), Hagerman (+27.7 percent), Melba (+23.9 percent), and Notus (+17.9 percent).

# RESIDENT POPULATION OF STATES

## April 1, 1990 and April 1, 2000 Census

## July 1, 2004 and July 1, 2005 Estimates

(Includes Armed Forces residing in each state.)

REGION, DIVISION, AND STATE	ESTIMATES		CENSUS		CHANGE 4/1/00 TO 7/1/05

## 2005 IDAHO SUMMARY

BIRTHS.....	The number of Idaho resident live births increased by 2 percent in 2005, up 535 births from 22,529 in 2004 to 23,064 in 2005. The birth rate decreased 1 percent, from 16.2 births per 1,000 population in 2004 to 16.1 in 2005.
OUT-OF-WEDLOCK BIRTHS .....	The number of births to unmarried women increased 4 percent from 5,079, to a record high of 5,273 in 2005. At the same time, the percent of out-of-wedlock births increased 2 percent from 22.5 percent in 2004 to 22.9 percent in 2005.
DEATHS .....	Idaho resident deaths increased by 5 percent in 2005, up 500 deaths from 10,013 in 2004 to 10,513 in 2005. Likewise, the mortality rate increased 3 percent, from 7.2 deaths per 1,000 population in 2004 to 7.4 in 2005.
STILLBIRTHS .....	The number and ratio of Idaho resident stillbirths have fluctuated considerably over the past decade. In 2005, the number of reported stillbirths increased to 134 from 125 in 2004. The stillbirth ratio increased 5 percent from 5.5 per 1,000 live births in 2004 to 5.8 in 2005.
INFANT DEATHS .....	The infant mortality rate remained the same in 2005, 6.2 per 1,000 live births. The number of infant deaths increased 2 percent from 139 to 142 in 2005. The neonatal mortality rate remained the same in 2005, 4.0 per 1,000 live births; the postneonatal mortality rate decreased from 2.2 per 1,000 live births in 2004 to 2.1 in 2005.
INDUCED ABORTIONS .....	The number of induced abortions among Idaho residents increased 13 percent from 1,618 in 2004 to 1,827 in 2005 and the rate increased from 5.5 per 1,000 females aged 15-44 to 6.1. The number of induced abortions occurring in Idaho was up 14 percent from 963 in 2004 to 1,099 in 2005.
MARRIAGES .....	The number of marriages occurring in Idaho decreased slightly in 2005, from 14,997 in 2004 to 14,933 in 2005. The 2005 marriage rate decreased from 10.8 marriages per 1,000 population to 10.4. This rate is the lowest marriage rate recorded for Idaho in the last 50 years.
DIVORCES .....	The number of divorces occurring in Idaho increased 3 percent in 2005 to 7,118 from 6,921 in 2004. The 2005 divorce rate remained the same in 2005, 5.0 per 1,000 population. The 2005 divorce rate is the lowest rate Idaho has experienced since 1971 when the rate was also 5.0 per 1,000 population.

1. Number and ratio of stillbirths and perinatal deaths in 1996-2004 differ from previously published data due to revisions in the database.

2. Number, rate, and ratio may differ slightly from previously published data due to revisions in the database.

3. In 2003, a question on pregnancy status among females aged 10-54 was added to the Idaho death certificate resulting in the identification of more maternal deaths. Maternal death data for 2003-2005 are not comparable with data prior to 2003.

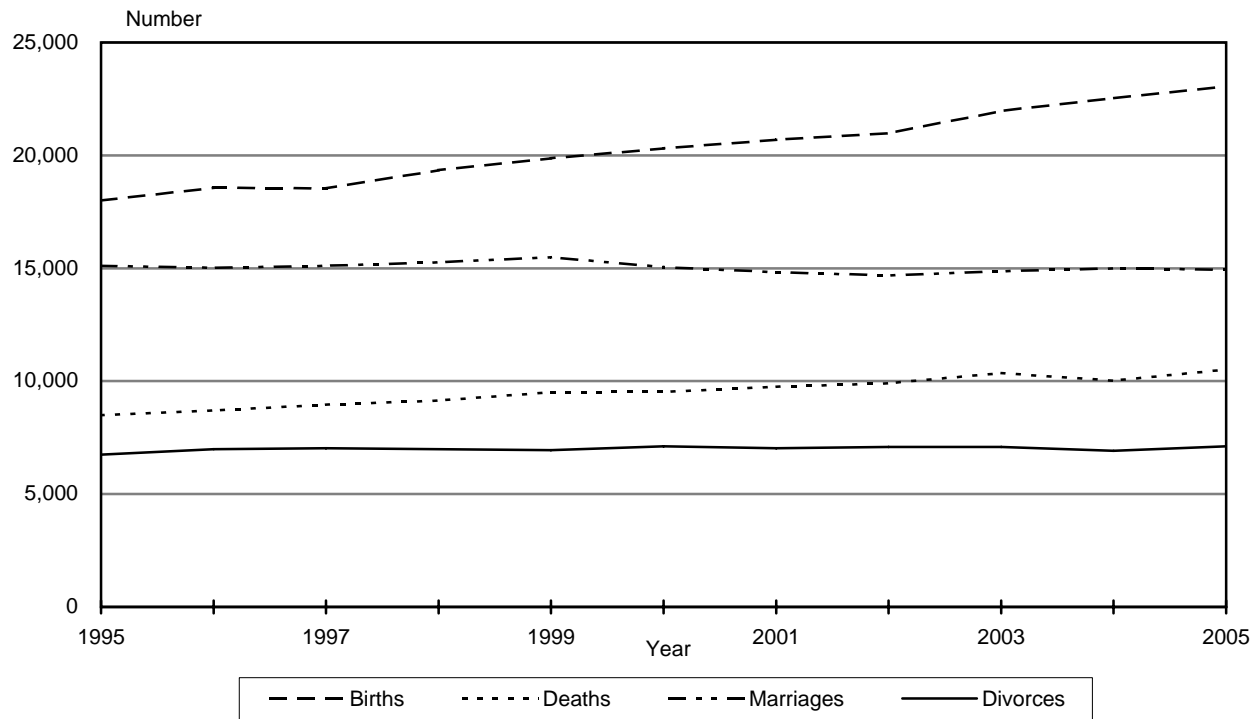

4. Marriage, divorce, and specified abortion data are for events occurring in Idaho; all other data reflect events occurring to Idaho residents.

Rates for 1996-1999 are based on the 1990 Census from the U.S. Census Bureau, Internet release March 9, 2000. Rates for 2000 are based on 2000 Census, Internet release date August 1, 2001. Estimates for 2001-2005 are based on the 2000 Census, U.S. Census Bureau and National Center for Health Statistics, Internet release August 8, 2003, April 9, 2004, April 14, 2005, and March 16, 2006.

1. Source for population: U.S. Bureau of the Census, Internet release March 16, 2006.
2. Births, deaths: county of residence. Rate: number per 1,000 population.
3. Marriages, divorces: county of occurrence. (Divorces by county will not total district and state totals because 43 tribal court divorces are not included in county totals; tribal court divorces are included in district totals. See page 122 for number of divorces granted by tribal courts). Rate: number per 1,000 population.
4. In 2006, the 2005 Idaho divorce data base was revised.

Infant death rate: Number of infant deaths under one year of age per 1,000 live births.

Stillbirth ratio: Number of spontaneous fetal deaths of at least 20 weeks gestation or a weight of 350 grams per 1,000 live births.

Perinatal ratio: Number of stillbirths plus infant deaths within the first 6 days of life per 1,000 live births.

NA: not available.

NA: Birth rates for 1922-1929, 1931-1939, and 1941-1949 are not available because population estimates are not available.

Births from 1922 to 1963 are numbers occurring in Idaho regardless of person's state of residence.

Births from 1964 to 2005 are numbers occurring to residents of Idaho, regardless of state of occurrence.

Birth rate: number of births per 1,000 population in corresponding year.

Source for population: 1930, 1940, 1950, 1960, 1970, 1980, 1990, and 2000 are Census estimates from the U.S. Census Bureau.

Population estimates for 1951-1959 are in-house estimates based on the average-annual change in the population from 1950 and 1960 based on 1950 and 1960 Census. Rates from 1961 to 2005 not including the Census years, are based on number of births and postcensal population estimates provided in the corresponding Idaho Vital Statistics annual report. Population estimates may have been revised since the publication of the annual reports.

2005	28	0.6	2,387	44.7	659	20.8	1,728	79.7

1. Pregnancies include live births, induced abortions, and reportable stillbirths (only those fetal deaths with a gestational period of 20+ weeks or which weigh 350+ grams are required to be reported under Idaho law).
2. Pregnancy rate: Number of pregnancies per 1,000 females in corresponding age group. Rates for <15 age group are based on females aged 10-14. Idaho rates are calculated using population estimates from the U.S. Bureau of the Census. For 2005 rates, Internet release 8/16/2006, for 2004 rates, Internet release 9/9/2005, for 2003 rates, Internet release 8/18/2004, for 2001-2002 rates, Internet release 8/8/2003, for 2000 rates, Internet release 8/1/2001, and for 1996-1999 rates, Internet release 3/9/2000. In 2003, Idaho received additional abortion records from Montana for Idaho resident induced abortions occurring in Montana. In 2006, Idaho received additional stillbirth records from Utah and Washington for Idaho resident stillbirths occurring in these states. Data bases from 1996-2004 have been revised to include these records in pregnancy numbers and shown on this table. Data may differ from previous publications due to updates in the data base, revisions in population estimates, and standardization of file cutoff dates.

NA: Death rates for 1922-1929, 1931-1939, and 1941-1949 are not available because population estimates are not available.

Deaths from 1922 to 1963 are numbers occurring in Idaho regardless of person's state of residence.

Deaths from 1964 to 2005 are numbers occurring to residents of Idaho, regardless of state of occurrence.

Death rate: number of deaths per 1,000 population in corresponding year.

Source for population: 1930, 1940, 1950, 1960, 1970, 1980, 1990, and 2000 are Census estimates from the U.S. Census Bureau.

Population estimates for 1951-1959 are in-house estimates based on the average-annual change in the population from 1950 and 1960 based on 1950 and 1960 Census. Rates from 1961 to 2005 not including the Census years, are based on number of deaths and postcensal population estimate provided in the corresponding Idaho Vital Statistics annual report. Population estimates may have been revised since the publication of the annual reports.

Note: Husband's and/or wife's residency may have been in Idaho or out of state.

Marriage rate: number of marriages occurring in Idaho per 1,000 population in Idaho in corresponding year.

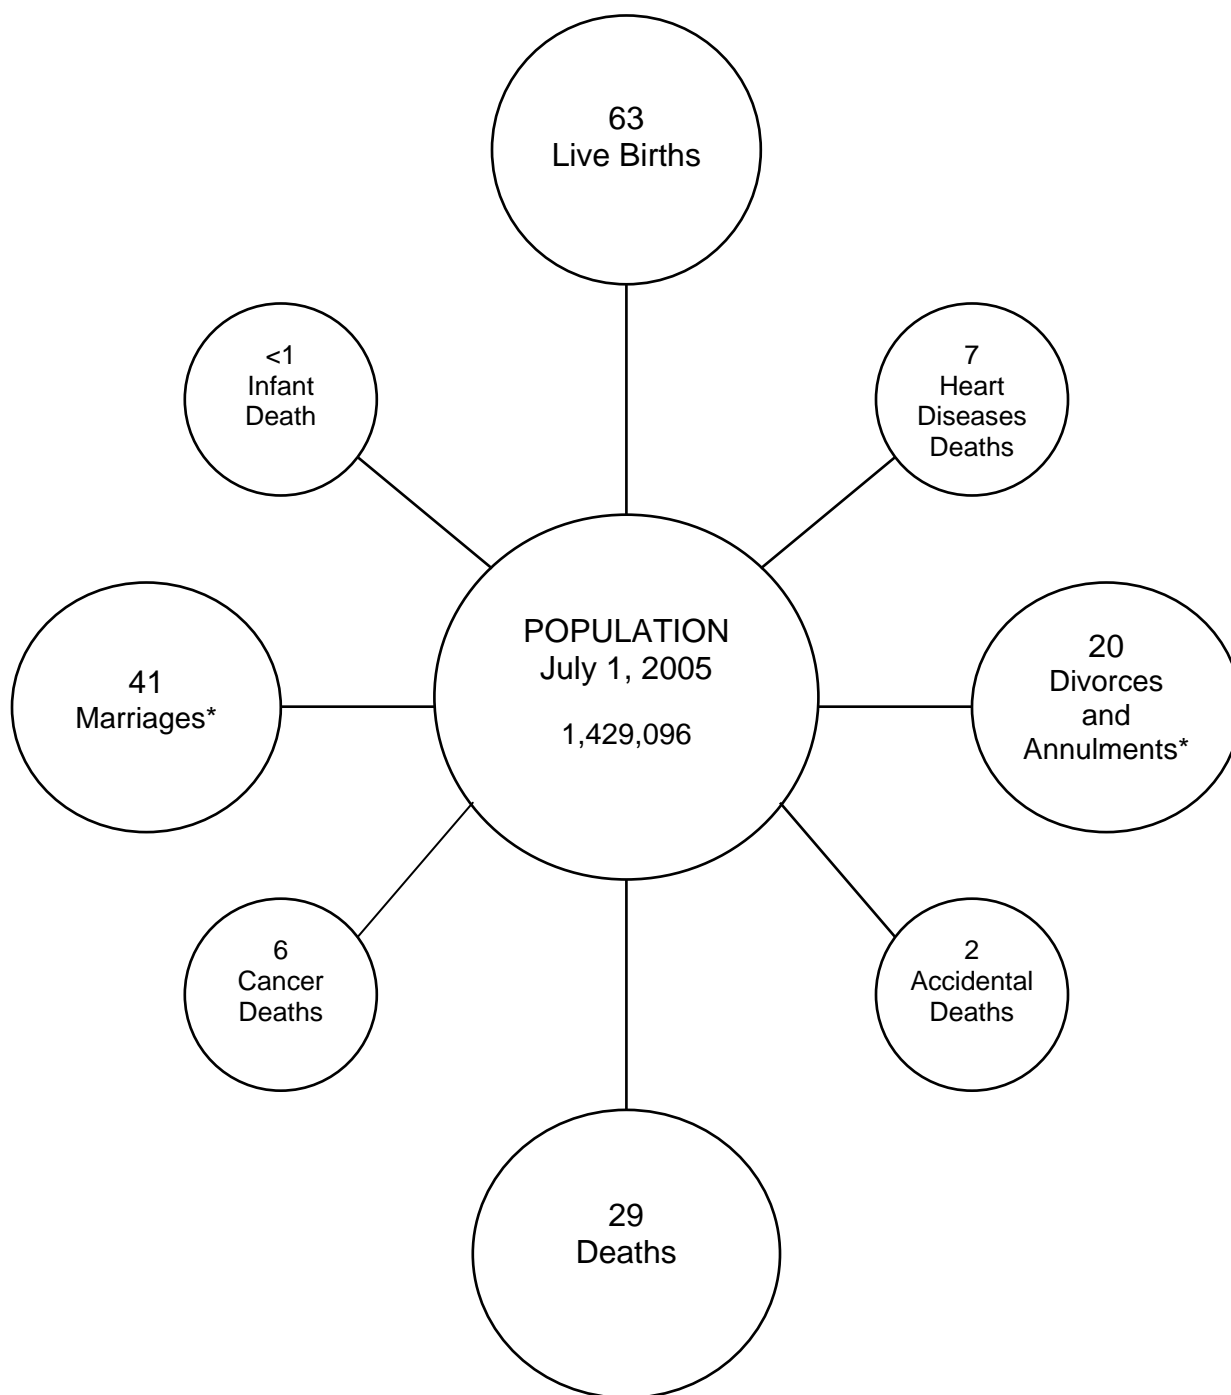

Divorce rate: number of divorces occurring in Idaho per 1,000 population in Idaho in corresponding year.

Source for population: 1960, 1970, 1980, 1990, and 2000 are Census estimates from the U.S. Census Bureau.

Population estimates for 1952-1959 are in-house estimates based on the average-annual change in the population from 1950 and 1960 based on 1950 and 1960 Census. Rates from 1961 to 2005, not including the Census years, are based on number of marriages or divorces and postcensal population estimate provided in the corresponding Idaho Vital Statistics annual report. Population estimates may have been revised since the publication of the annual reports.

## IDAHO VITAL EVENTS

Among Idaho Residents, each day in 2005, there were approximately:

\* Marriage and divorce data are based on events occurring in Idaho; all other data reflect events occurring to Idaho residents.

## **NATALITY**

### **U.S.**

The United States recorded an estimated 4,140,419 live births in 2005 (preliminary), an increase of 1 percent from the 4,112,052 live births reported in 2004. The preliminary 2005 birth rate was 14.0 per 1,000 population, unchanged from 2004. The U.S. preliminary 2005 fertility rate (the number of births per 1,000 women aged 15-44) was 66.7, a slight increase over the rate for 2004 (66.3).

### **Idaho**

Following decades of consistently higher birth and fertility rates, Idaho's birth rates fell considerably in the 1980s to converge with the U.S. rate in 1988 for the first time. After 3 years below the U.S. rate, Idaho's birth rate rose above the U.S. birth rate again from 1992 through 2005. In 2005, the birth rate for Idaho was 16.1, a 1 percent decrease from 16.2 in 2004. The estimated fertility rate increased slightly, from 77.2 in 2004 to 77.4 in 2005. The actual number of births rose 2 percent from 22,529 to 23,064. This is the highest number of resident births recorded for the state, but much of the increase is a result of population growth.

Idaho resident 2005 live birth rates ranged from a low of 11.3 per 1,000 population in District 1 and District 2 to a high of 20.4 per 1,000 in District 7. Three districts experienced higher birth rates in 2005: District 2 (11.3), District 6 (18.5), and District 7 (20.4). District 1, District 3, and District 5 recorded lower rates in 2005 than 2004. The rate in District 4 (15.6) remained the same.

### **Revised Idaho Birth Certificate**

In 2004, Idaho implemented the latest revision of the U.S. certificate called the 2003 U.S. Standard Certificate of Live Birth. As a result, data collected in 2005 may not be comparable with data collected prior to 2004. Furthermore, not all states revised their certificates by 2005; therefore, not all data items are collected by other states. Data highlights below will reflect changes in the collection of data on the birth certificate. For more information, see Technical Notes on the Revision of the Certificate of Live Birth.

### **Race and Ethnicity of Mother**

The collection of race and ethnicity was revised on the 2004 Idaho Birth Certificate. Beginning in 2004, one or more race and one or more Hispanic origin may be reported on the certificate. However, not all states collected data for more than one race and ethnicity. To be comparable with the U.S. and other states, Idaho data were collapsed into six race categories: white, black, American Indian, Asian and Pacific Islander, other race, or race not stated. Ethnicity data were collapsed into Hispanic, non-Hispanic, or ethnicity not stated. In addition, the method race data are categorized changed in 2004, therefore race data in 2005 are not comparable with race data prior to 2004. In 2005, 92.6 percent of Idaho mothers were white, 0.6 percent were black, 1.7 percent were Native American, 1.6 percent were Asian or Pacific Islander and 3.5 percent indicated other race. A total of 15.2 percent of mothers were of Hispanic origin and 84.8 percent were non-Hispanic. Race and Hispanic origin are reported separately on birth certificate and mothers of Hispanic origin may be of any race.

### **Age of Mother**

The mean age of all Idaho mothers was 26.6 years in 2005. For first-time mothers, the mean age was 23.8 years in 2005 compared with 25.2 years for first-time mothers in the U.S. in 2004. The ages for first-time mothers ranged from 13 to 51 in Idaho in 2005.

## **Birth Attendant**

In 2005, physicians attended 95 percent of births to Idaho residents, which was a slight increase from 94 percent in 2004. The number of births attended by certified nurse midwives decreased from 723 to 682 and the number of births attended by lay midwives increased from 384 to 406 from 2004 to 2005.

## **Place of Birth**

Approximately 3 percent (629) of Idaho's 2005 resident births occurred in a non-hospital setting. The percent of resident births in non-hospital settings has steadily decreased over the last decade, from 4 percent in 1994. Most of the out-of-hospital births occurred at home (343) or in freestanding birthing centers (285).

## **Prenatal Care**

The collection of prenatal care data changed dramatically with the revision of the Idaho birth certificate in 2004. Prenatal care data on the revised certificate are based on the date of the first prenatal care visit, the length of gestation, and the date of birth. Prior to 2004, prenatal care on the certificate was based on the month prenatal care began (first, second, third, etc. month of pregnancy). In 2005, 71.4 percent of births were to mothers with a first visit in the first trimester. A total of 22.8 percent of births were to mothers with their first visit in the second trimester, and 4.8 percent of births were to mothers with their first visit in the third trimester. One percent of births were to mothers with no prenatal care visits. Idaho prenatal care data based on date of first visit in 2005 are not comparable with prenatal care data based on month prenatal care began.

## **Education of mother**

In 2004, education data collected on the birth certificate were revised to report the highest degree or level of school completed at the time of delivery. Prior to 2004, the number of years of school completed was reported on the Idaho birth certificate. In 2005, 16.3 percent of mothers were not high school graduates and 83.7 percent of mothers were high school graduates, had their GED or attained a higher level of education at the time of delivery. Of the Idaho mothers aged less than 18 years, 90.4 percent had not yet received their high school diploma. Nearly forty percent (39.9 percent) of mothers aged 18 and 19 had not received their diploma, and 12.7 percent of mothers aged 20 and older had not received their diploma at the time of delivery.

## **Low Birth Weight and Preterm Births**

Nationally, 8.2 percent of births were low birthweight (< 2,500 grams) in 2005 (preliminary). Among Idaho residents, the percent of low birth weight live births decreased 2 percent from 6.8 percent in 2004 to 6.7 percent in 2005. Preliminary 2005 U.S. data indicate 12.7 percent of live births were preterm (less than 37 completed weeks of gestation). The percent of preterm infants was 11.4 percent in Idaho in 2005 up from 10.9 percent in 2004. There is a correlation between low birth weight babies and preterm births; of the 1,544 low birth weight Idaho babies in 2005, 66.0 percent were born preterm. There has been an upward trend in low birth weight and preterm births in recent years which has been influenced in part by the upsurge in the multiple births. In 2005, there were 635 twins and 48 triplets or higher-order births. The percent of low birth weight infants was 5.0 for singletons, 59.7 for twins, and 95.8 percent for triplets or higher-order births in 2005. The Idaho preterm rate was 9.7 percent for singletons, 66.5 percent for twins, and 87.5 percent for triplets or higher-order births in 2005.

The highest percentage of low birth weight infants were to District 6 mothers (7.6 percent) and District 4 mothers (6.9 percent). The highest percentage of preterm births were to District 4 and District 3 mothers (13.0 and 11.9, respectively).

## **Out of Wedlock**

Out-of-wedlock births increased 4 percent in number from 5,079 in 2004 to 5,273 in 2005. The percent of out-of-wedlock Idaho births increased 2 percent, from 22.5 percent in 2004 to 22.9 percent in 2005. Nationally in 2005 (preliminary), 36.8 percent of all births were to unmarried women.

## **Method of Delivery**

In 2005, Idaho resident birth rate for vaginal, non-VBAC (vaginal deliveries after a cesarean) births was 75.8 deliveries per 100 births compared with 69.8 per 100 births in the U.S. (2004). Conversely, Idaho's total cesarean rate (22.6 deliveries per 100 births) in 2005 was lower than the national rate of 29.1 per 100 births in 2004. Rates for vaginal deliveries after a cesarean and repeat cesareans are based on mothers with a previous cesarean. Idaho's VBAC rate was 16.6 deliveries per 100 births to women with previous cesarean, higher than the national rate of 9.2 in 2004. The repeat cesarean rate for Idaho was 83.4 per 100 births to women with a previous cesarean; the national rate was 90.8. In 2004, the wording for the method of delivery item changed on the Idaho certificate and outcome data are not 100 percent comparable to data based on non-revised items.

## **Payment Source for Delivery**

In 2005, 51.0 percent of deliveries were paid by private insurance in Idaho. According to birth certificate data, 32.5 percent of births were paid by Medicaid and 10.2 of births were paid by the mother or family. A total of 4.3 percent of births were paid by other governmental agencies (Indian Health Services, CHAMPUS/TRICARE, federal, state, or local government). A total of 2.0 of births had "other" payment source or did not have any payment source reported for the delivery. The payment source for delivery may change after the birth certificate is filed with the state.

## **Cigarette Smoking**

Prior to 2004, tobacco use during pregnancy (yes or no) was reported on the Idaho birth certificate. Beginning in 2004, cigarette smoking before and during pregnancy is reported on the revised birth certificate. Among birth certificates with reported data on cigarette smoking, 17.5 percent of mothers reported smoking the three months prior to pregnancy; 12.8 percent reported smoking during the first three months of pregnancy; 10.6 percent reported smoking during the second three months of pregnancy; and 9.8 percent reported smoking during the third three months of pregnancy. Overall, 13.2 percent of Idaho mothers reported smoking any time during pregnancy.

## **Risk Factors**

The section on maternal risk factors was revised on the 2004 birth certificate. A total of 5,127 births (22.3 percent) were to Idaho mothers with at least one risk factor during pregnancy. The most common risk factor to mothers was previous cesarean delivery (2,291) followed by hypertension (1,489 total, 145 with prepregnancy hypertension and 1,344 with gestational hypertension), and diabetes (941 total, 162 with prepregnancy diabetes, 768 with gestational diabetes, and 11 with unknown if prepregnancy or gestational diabetes).

## **Infections**

There are 12 infections listed on the revised Idaho birth certificate plus a category for "other" infections present and/or treated during this pregnancy. The most common infection reported among Idaho mothers was group B streptococcus. A total of 3,970 (17.3 percent) births were to mothers with group B streptococcus treated and/or present during pregnancy. In all, 4,825 (21.0 percent) births were to mothers with at least one infection present or treated during pregnancy in 2005.

## **Characteristics of Labor and Delivery**

The most common characteristics of labor and delivery reported in 2005 were: epidural or spinal anesthesia during labor (15,452 births), induction of labor (6,506 births), augmentation of labor (4,570 births), and antibiotics received by mother during pregnancy (4,326).

## **Maternal Morbidity**

Maternal morbidity is defined on the Idaho birth certificate as complications associated with labor and delivery. 1.7 percent of Idaho births (395) were to mothers with one or more complications of labor and delivery reported on the birth certificate in 2005. The leading complications reported were: third or fourth degree perineal laceration (248 births), unplanned operating room procedure following delivery (77 births), and maternal transfusion (76 births).

## **Abnormal Conditions of the Newborn**

One in seven newborns had at least one abnormal condition reported on the 2005 birth certificate (3,352 or 14.6 percent). The most common abnormal condition reported was Neonatal Intensive Care Unit (NICU) admission (1,890), followed by assisted ventilation required immediately following delivery (1,096), and failed newborn hearing test (860).

## **Congenital Anomalies of the Newborn**

A total of 154 newborns had one or more congenital anomaly(ies) reported on the 2005 birth certificate. Other suspected chromosomal disorders with karyotype pending was reported for 33 births (6 had confirmed karyotype disorders), cyanotic congenital heart disease was reported for 29 births, cleft lip with or without cleft palate was reported for 21 births (7 had cleft palate alone).

## **WIC (Supplemental Nutritional Program for Women, Infants, and Children)**

The revised 2004 Idaho birth certificate includes a new variable for reporting if mother received WIC food for herself during this pregnancy (yes or no)? A total of 22,189 birth records had data for WIC participation; 875 records did not have data regarding WIC participation. Among Idaho residents with known data for WIC participation, 38.5 percent of mothers received WIC food for herself during her pregnancy. Mothers aged less than 20 were twice as likely to receive WIC food (70.7 percent) than mothers aged 20 and older (35.4 percent). Unmarried mothers were twice as likely to received WIC food (63.0 percent) than married mothers (31.3 percent).

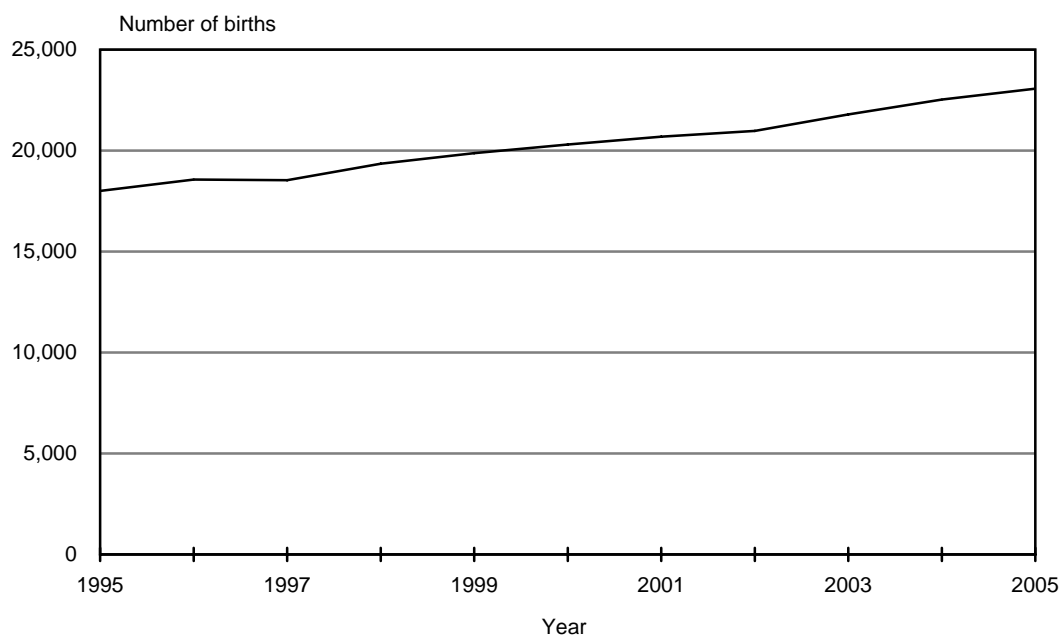

## **Breastfeeding**

The revised 2004 birth certificate includes a new item for reporting if infant was being breastfed at birth. Of the Idaho resident records with known data for breast feeding, 88.0 percent indicated the infant was being breastfed at birth. Mothers aged less than 20 were slightly less likely to have breastfed at the time of birth (83.4 percent) than mothers aged 20 and older (88.5 percent). Fewer unmarried mothers breastfed at birth (79.4 percent) than married mothers (90.6 percent).

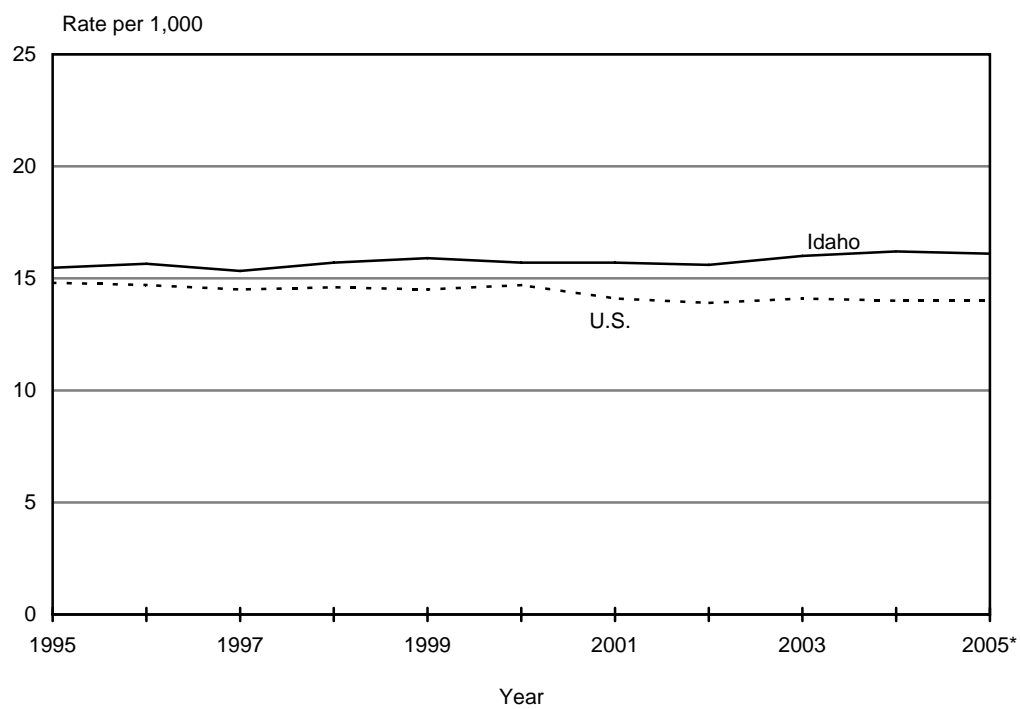

## **Teen Pregnancy**

Reportable pregnancies included live births, abortions, and stillbirths. Miscarriages under 20 weeks are not reportable in Idaho. In 2005, there were 2,415 reportable pregnancies among Idaho females under the age of 20 (2,038 live births, 365 abortions, and 12 stillbirths). During the past decade there has been a steady decline in the annual teen pregnancy numbers and rate among Idahoans. From 1996 to 2005, the pregnancy rate for females aged less than 15 declined 40.0 percent from 1.0 per 1,000 to 0.6 per 1,000. At the same time, the pregnancy rate for teens aged 15-17 years declined 35.0 percent from 32.0 per 1,000 in 1996 to 20.8 per 1,000 in 2005. The pregnancy rate for females aged 18-19 decreased from 91.6 per 1,000 to 79.7 per 1,000 (13.0 percent decline).

## IDAHO RESIDENT LIVE BIRTHS 1995-2005

## U.S., IDAHO RESIDENT LIVE BIRTH RATES 1995-2005

\*U.S. rate for 2005 is preliminary.

County and district rates for 2001-2002 are based on the National Center for Health Statistics (NCHS), estimates for July 1, 2001-July 1, 2002, United States resident population from the Vintage 2002 postcensal series, Internet release date August 8, 2003. Rates for 2003, 2004, and 2005 are based on NCHS estimates for July 1, 2003, July 1, 2004, and July 1, 2005 United States resident population from the vintage 2003, 2004, and 2005 postcensal series, Internet release dates August 18, 2004, September 9, 2005, and August 16, 2006, respectively. Vintage data sets were prepared under a collaborative arrangement with the U.S. Census Bureau.

Birth rate: Number of live births per 1,000 population.

1. In 2004, multiple races and Hispanic origins may be reported on the revised Idaho birth certificate. Race and ethnicity data in 2005 are not comparable with race and ethnicity data prior to 2004. For mothers with multiple races, the races were bridged to a single race category; however, bridged-race data are not available for out-of-state births. \*Total includes nine (9) out-of-state births with multiple races; one each in Bonneville County (District 7), Clearwater County (District 2), and Lemhi County (District 7); two each in Benewah County (District 1), Bonner County (District 1), and Latah County (District 2). For more information, see Technical Notes.
2. Race and Hispanic origin are reported separately on the birth certificate; Hispanic origin are included in appropriate race totals.

\* In 2004, the Idaho birth certificate was revised for the question on mother's education. Prior to 2004, the question on education was based on the number of years of school completed; beginning in 2004, education is based on the highest degree or level of school completed at time of delivery. Data in 2005 are not comparable with data prior to 2004.

5. Total female population aged 45-49; rates for females aged 45+ are based on female population 45-49.

## PRENATAL CARE

The effects of prenatal care are difficult to quantify, but appropriate care can promote healthier pregnancies by detecting and managing pre-existing medical conditions, and providing health behavior advice<sup>1</sup>. The measurement of prenatal care in the U.S. and Idaho changed dramatically with the implementation of the 2003 U.S. Standard Certificate. Prenatal care data on the revised certificate are based on the date of the first prenatal care visit and the date of the last menstrual period (LMP). If LMP date is not stated, the date of first prenatal care visit, the clinical length of gestation, and the baby's birth date are used to estimate the onset of prenatal care. According to the National Center for Health Statistics (NCHS), the change in data collection yields more accurate data because care is based on a date in a prenatal medical record rather than mother's recollection of month of first visit<sup>2</sup>. Prenatal care data based on the 2003 revision and the previous standard (1989 U.S. Standard Certificate) are not directly comparable.

In 2004, NCHS published prenatal care based on the seven states using the 2003 U.S. Standard Certificate, including Idaho, and published prenatal care based on 41 states, New York City, and Washington D.C. using the 1989 U.S. Standard Certificate. Much, if not all of the difference between states using the 2003 U.S. Standard Certificate and states using the 1989 U.S. Standard Certificate is related to changes in reporting and *not* to changes in the timing or utilization of prenatal care<sup>1</sup>.

PERCENT BEGINNING PRENATAL CARE IN THE FIRST TRIMESTER*	
U.S., 2004, States based on 2003 U.S. Standard Certificate <sup>1</sup>	72.9%
Idaho, 2004	71.9%
Idaho, 2005	71.4%
U.S., 2004, States based on 1989 U.S. Standard Certificate <sup>1</sup>	83.9%

\* Prenatal care data based on the 2003 Revision of the U.S. Certificate are not comparable with data based on 1989 U.S. Certificate.

One measure of prenatal care in which classifications of the adequacy of prenatal care are based on the onset of prenatal care, the number of prenatal visits, and the length of gestation is the Adequacy of Prenatal Care Utilization (APNCU) Index. The APNCU Index is based on full recommendations set forth by the American College of Obstetricians and Gynecologists (ACOG). This index classifies care as intensive, adequate, intermediate, inadequate, or no care by comparing the number of actual prenatal care visits to the number of visits that a woman was expected to receive, given the onset of prenatal care and the length of gestation.

In reviewing Trimester of First Prenatal Care Visit and APNCU data, keep in mind:

- 1) Prenatal care data based on date of first visit are not comparable with prenatal care data based on month prenatal care began. There is a break in the Idaho trend line between 2003 and 2004.
- 2) There were a high proportion of Idaho records with date of first visit and/or date of last menstrual period not stated in 2005.
- 3) Not all states have revised their birth certificate to the 2003 U.S. Standard Certificate. Idaho resident births occurring in states with non-revised certificates will not have comparable data for onset of prenatal care. Data are shown as not stated in data table(s).

Not stated	32	1	NA	-	NA	1	NA	3	NA	27

1. In 2004, the Idaho birth certificate was revised. Beginning in 2004, Idaho prenatal care data are based on date of first prenatal care visit as reported in the mother's medical record. Data are NOT comparable with data based on month prenatal care began. NA: not applicable.

2. Percents based on records with stated date of first prenatal care visit.

3. Race and ethnicity data in 2005 are not comparable with race and ethnicity data prior to 2004. For mothers with multiple races, the races were bridged to a single race category; however, bridged-race data are not available for out-of-state births. Other race includes nine (9) out-of-state births with multiple races. Race and Hispanic origin are reported separately on the birth certificate; Hispanic origin are included in appropriate race totals.

4. 'Other Government' includes Indian Health Services, CHAMPUS/TRICARE, and other government (federal, state, local).

5. Based on cigarette smoking during pregnancy. In 2004, the collection process for tobacco use changed on the revised Idaho birth certificate. Data in 2005 are not comparable to data prior to 2004. For more information, see Technical Notes.

6. High parity for age: one or more previous live births for females 17 years or age or younger; three or more previous live births for females 18-21 years of age; four or more previous live births for females 22-24 years of age; and five or more previous live births for females aged 25 years and older. Not high parity for age: includes all other combinations of parity and age of mother.

Percents based on records with stated date of first prenatal care visit.

**Caution is advised that Franklin, Oneida, Payette, Teton, and Washington counties have 30 percent or more records with date of first prenatal care visit not stated.**

\* In 2004, the Idaho birth certificate was revised. Beginning in 2004, Idaho prenatal care data are based on date of first prenatal care visit as reported in the mother's medical record. Data are NOT comparable with data based on month prenatal care began.

1. In 2004, multiple races and Hispanic origins may be reported on the revised Idaho birth certificate. Race and ethnicity data in 2005 are not comparable with race and ethnicity data prior to 2004. For mothers with multiple races, the races were bridged to a single race category. For more information, see Technical Notes.
2. Percents are based on records with stated birth weight.
3. Race and Hispanic origin are reported separately on birth certificate. Mothers of Hispanic origin are included in appropriate race totals.

37+ Completed Weeks Gestation (Term Births)	20,187	90.3	213	33.5	6	12.5
Gestational Age Not Stated	21	NA	-	NA	-	NA

Percents based on records with stated gestational age.

The primary measure used to determine the gestation age of the newborn is the interval between the first day of mother's last normal menstrual period (LMP) and the date of birth. If LMP is less than 16 completed weeks, greater than 48 completed week's, not stated, or implausible with birth weight, then the obstetric estimate of completed weeks gestation is used. Gestational age based on LMP and obstetric estimate are comparable with data based on LMP and obstetric estimate only.

1. WIC participation: Did mother get WIC food for herself during this pregnancy? WIC is a supplemental nutritional program for women, infants, and children. Data from birth certificate may differ from data from the WIC Program.

2. The revised 2004 birth certificate includes a new variable for reporting if infant was being breastfed at birth or at the time the birth certificate was completed (yes or no)?

3. Percents are based on records with known breast feeding or WIC data.

## OUT-OF-WEDLOCK BIRTHS

Following a decline in the number of Idaho resident out-of-wedlock live births in 1997, the number increased each year from 1998 to 2005. The number of out-of-wedlock births rose 4 percent between 2004 and 2005, from 5,079 to 5,273. At the same time, the percentage of total live births that were out-of-wedlock births increased 2 percent from 22.5 in 2004 to 22.9 in 2005.

The 2005 out-of-wedlock percentages decreased for blacks and Asian/Pacific Islanders, and increased for whites, Native Americans, "other race" and Hispanics. Note, that Idaho has a relatively small data base by race; some fluctuation from year to year may be expected.

IDAHO RACE/ETHNICITY-SPECIFIC PERCENTAGES					
	2005 <sup>1</sup>	2004 <sup>1</sup>	2003	2002	2001
Total	22.9%	22.5%	22.3%	21.9%	22.0%
White	21.7	21.3	21.6	21.2	21.4
Black	30.1	40.6	38.5	33.3	40.5
Native American	59.0	58.1	59.3	54.0	56.9
Asian/Pacific Islander	12.1	17.7	14.2	13.8	11.6
Other race	36.3	36.1	15.4	0.0	28.6
Ethnicity: Hispanic <sup>2</sup>	37.8	37.3	36.4	36.1	34.1

1. The collection of race and ethnicity data changed in 2004; for more information, see Technical Notes.

2. Race and Hispanic origin are reported separately on the birth certificate. Women of Hispanic origin are included in appropriate race totals.

The U.S. out-of-wedlock live birth rate increased 3 percent in 2004 to 35.8 percent from 34.6 percent in 2003. By race, U.S. 2004 out-of-wedlock percent for whites was 41 percent higher than Idaho's percent, and the U.S. black percent was 129 percent higher than Idaho's percent. The U.S. 2004 Hispanic percent was 23 percent higher than Idaho's percent in 2005.

	Total	White	All Other		Ethnicity: Hispanic
			Total	Black	
U.S. 2004 <sup>1</sup>	35.8%	30.5%	54.7%	68.8%	46.4%
Idaho	22.9	21.7	35.7	30.1	37.8

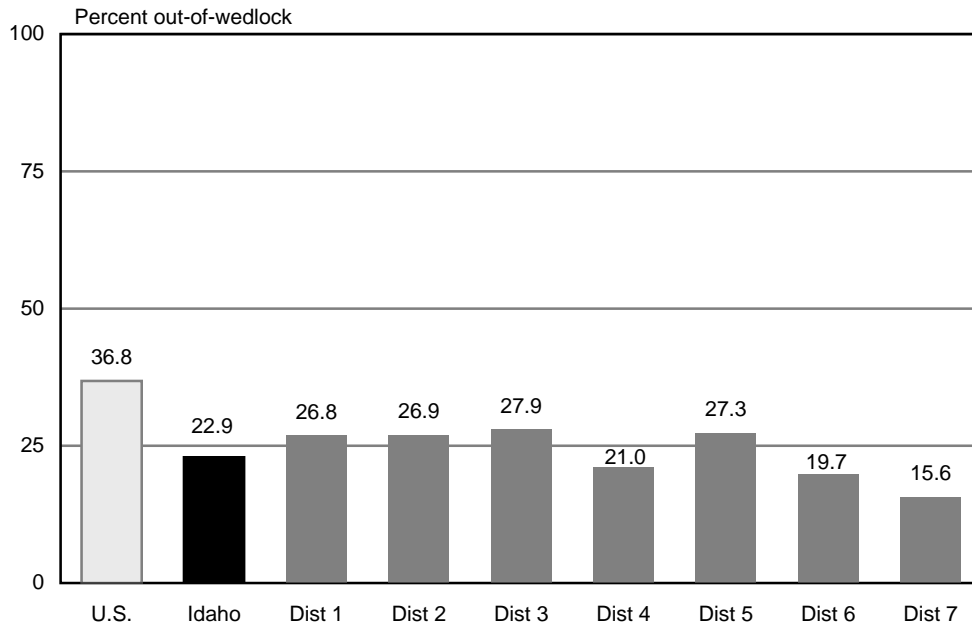

When comparing Idaho with the U.S., one should keep in mind that Idaho has a predominantly white population; the usually higher rates for most other races/ethnicities have less effect on the overall rate in Idaho.

From 2004 to 2005, the percentage of out-of-wedlock births increased in Health Districts 2, 3, 4, and 7. District 3 recorded the highest proportion of live births that were out of wedlock (27.9 percent) followed by District 5 (27.3 percent). District 7 again recorded the lowest percent (15.6 percent).

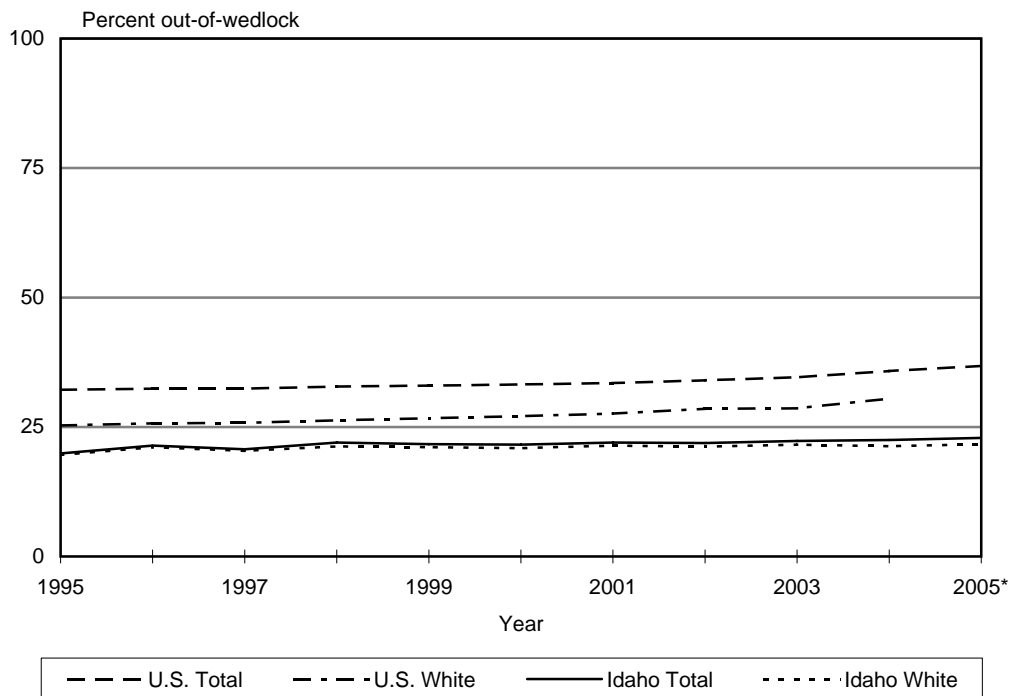

Counties with the highest percentages of out-of-wedlock births were Adams (55.2 percent), Clearwater (43.8 percent), Benewah (37.8 percent), Shoshone (37.1 percent), and Nez Perce (36.1 percent). The lowest percentages occurred for Madison (3.9 percent), Franklin (7.4 percent), Butte (10.5 percent), Bear Lake (11.9 percent), and Jefferson (13.7 percent) Counties.

1. "Births: Final Data for 2004," [National Vital Statistics Reports](#), National Center for Health Statistics, Vol. 55/No. 1, September 29, 2006.

1. In 2005, multiple races and Hispanic origins may be reported on the revised Idaho birth certificate. Race and ethnicity data in 2005 are not comparable with race and ethnicity data prior to 2004. For mothers with multiple races, the races were bridged to a single race category; however, bridged-race data are not available for out-of-state births. \*Total includes two (2) out-of-state births with multiple races; one in District 2 (Clearwater County) and one in District 7 (Lemhi County). For more information, see Technical Notes.

2. Race and Hispanic origin are reported separately on the birth certificate; Hispanic mothers are included in appropriate race totals.

Percents based on records with stated maternal morbidity and characteristics of labor and delivery reported.

**IDAHO RESIDENT LIVE BIRTHS**  
**Maternal Morbidity and Characteristics of Labor and Delivery**  
**2005**

Maternal Morbidity (Complications)	Number	Characteristics of Labor and Delivery	Number
Total Births	23,064	Total Births	23,064
Births with Maternal Morbidity(ies) reported	395	Births with Characteristic(s) reported	18,989
Maternal transfusion	76	Induction of labor	6,506
Third or fourth degree perineal laceration	248	Augmentation of labor	4,570
Ruptured uterus	1	Non-vertex presentation	405
Unplanned hysterectomy	2	Steroids for fetal lung maturation received by mother prior to delivery	412
Admission to intensive care unit	17	Antibiotics received by mother during labor	4,326
Unplanned operating room procedure following delivery	77	Clinical chorioamnionitis diagnosed during labor or maternal temperature $\geq 38^{\circ}\text{C}$ ( $100.4^{\circ}\text{F}$ )	263
None of the above	22,582	Moderate/heavy meconium staining of the amniotic fluid	867
Maternal morbidity not stated	87	Fetal intolerance to labor*	1,524
		Epidural or spinal anesthesia during labor	15,452
		None of the above	4,027
		Characteristic of labor and delivery not stated	48

\* Fetal intolerance of labor such that one or more of the following actions was taken: in-utero resuscitative measures, further fetal assessment, or operative delivery.

More than one type of morbidity or characteristic may be reported for a live birth. Starting with 2004, the collection process for medical data has changed. Data are not comparable to previous years. For more information, see Technical Notes.

## IDAHO RESIDENT LIVE BIRTHS Abnormal Conditions of the Newborn 2005

Abnormal Conditions of Newborn	Number
Total Births	23,064
Births with Abnormal Condition(s) reported	3,352
Assisted ventilation required	
Immediately following delivery	1,096
For more than six hours	436
NICU admission	1,890
Newborn given surfactant replacement therapy	211
Antibiotics given for suspected neonatal sepsis	677
Seizure or serious neurologic dysfunction	12
Significant birth injury*	24
Failed newborn hearing test	860
None of the above	19,630
Abnormal conditions not stated	82

\* Significant birth injury includes skeletal fracture, peripheral nerve injury, and/or soft tissue/solid organ hemorrhage which requires intervention.

More than one type of abnormal condition may be reported for a live birth. Starting with 2004, the collection process for abnormal condition data has changed. Data are not comparable to previous years. For more information, see Technical Notes.

## IDAHO RESIDENT LIVE BIRTHS Congenital Anomalies 2005

Congenital Anomalies	Number	Congenital Anomalies	Number
Total Births	23,064	Congenital malformations and deformations of the musculoskeletal system	
Births with Congenital Anomaly(ies) reported	142	Congenital diaphragmatic hernia	5
Congenital malformations of the nervous system		Gastroschisis	3
Anencephaly	4	Limb reduction defect	8
Meningomyelocele/Spina Bifida	6	Omphalocele	9
Congenital malformations of the circulatory system		Down syndrome	
Cyanotic congenital heart disease	29	Karyotype confirmed	7
Cleft lip and cleft palate		Karyotype pending	12
Cleft lip with or without cleft palate	20	Suspected other chromosomal disorder	
Cleft palate alone	7	Karyotype confirmed	6
Congenital malformations of genital organs		Karyotype pending	22
Hypospadias	19	None of the above	22,832
		Congenital anomalies not stated	90

More than one congenital anomaly may be reported for a live birth. Starting with 2004, the collection process for congenital anomaly data has changed. Some data may not be comparable to previous years. For more information, see Technical Notes.

Data in red were revised after 2005 Idaho Vital Statistics annual report was published.

**IDAHO RESIDENT LIVE BIRTHS**

Hispanic	3,487	198	5.7	3,283	94.3	6
Ethnicity not stated	117	19	19.8	77	80.2	21

Percents are based on records with stated cigarette smoking data.

1. In 2004, the collection process for tobacco use changed on the revised Idaho birth certificate. Data in 2005 are not comparable to data prior to 2004. For more information, see Technical Notes.
2. In 2004, multiple races and Hispanic origins may be reported on the revised Idaho birth certificate. Race and ethnicity data in 2005 are not comparable with race and ethnicity data prior to 2004. For mothers with multiple races, the races were bridged to a single race category; however, bridged-race data are not available for out-of-state births. Total includes nine (9) out-of-state births with multiple races. For more information, see Technical Notes.
3. Race and Hispanic origin are reported separately on the birth certificate; Hispanic mothers are included in appropriate totals.

1. Vaginal births, not including VBAC.

2. VBAC: Vaginal birth after previous cesarean.

Rates are based on records with known data for method of delivery.

Vaginal, non-VBAC rate: Number of vaginal, non-VBAC deliveries per 100 births.

Vaginal birth after previous cesarean (VBAC): Number of vaginal deliveries per 100 births to women with a previous cesarean.

Total cesarean rate: Number of cesarean deliveries per 100 births.

Primary cesarean rate: Number of cesarean deliveries per 100 births to women who had no previous cesareans.

Repeat cesarean rate: Number of cesarean deliveries per 100 births to women with a previous cesarean.

In 2004 the Idaho birth certificate was revised; collection process for method of delivery data changed. For more information, see Technical Notes.

Not stated	6	1	-	-	-	-	-	-	-	-	-	5

Percents are percents of total live births by age of mother and are based on records with known data for payment for delivery.

In 2004 the Idaho birth certificate was revised; collection process for payment source for delivery data changed. For more information, see Technical Notes.

1. Payment source for delivery at time birth record is filed with the State. Payment source may change after record is filed with the state.
2. Data for Medicaid-paid deliveries may differ from Medicaid statistics.
3. Other government includes Indian Health Services, CHAMPUS/TRICARE, and other government (federal, state, local).
4. Not applicable or other payment source includes births in which there was no payment for the delivery.

15-19	2,084	40.7	316	6.2	179.9
15-17	568	18.6	111	3.6	242.9
18-19	1,516	73.1	205	9.9	157.7

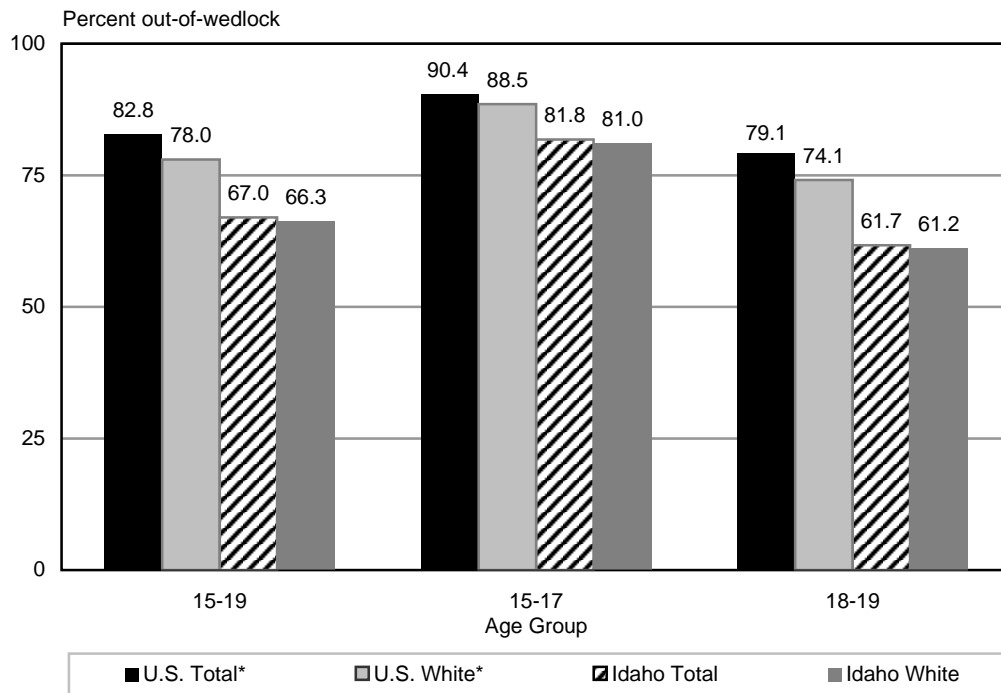

1. Pregnancies include live births, induced abortions, and reportable stillbirths (only those fetal deaths with a gestational period of 20+ weeks or which weigh 350+ grams are required to be reported under Idaho law.)
2. Number of pregnancies per 1,000 females in corresponding age group.
3. Induced abortion rate: Number of induced abortions per 1,000 females in corresponding age group.
4. Induced abortion ratio: Number of induced abortions per 1,000 live births in corresponding age group.
5. Rates for <15 age group are based on females aged 10-14.

U.S. data for teen pregnancies and abortions are not shown because they are not comparable to Idaho data. Abortion data from the Centers for Disease Control and Prevention's National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP) are adjusted to national totals compiled by The Guttmacher Institute (AGI) from their surveys of all known abortion providers because abortion data by age are not reported for three states (Alaska, California, and New Hampshire). The numbers of abortions published by NCCDPHP tend to be lower than the numbers published by AGI. For example, the total number of abortions reported by NCCDPHP was about 20 percent lower in 2000 than reported by AGI for the same reporting areas.

# **TEEN BIRTH RATES BY AGE** **U.S. (Preliminary) and Idaho (Total and White)** **2005**

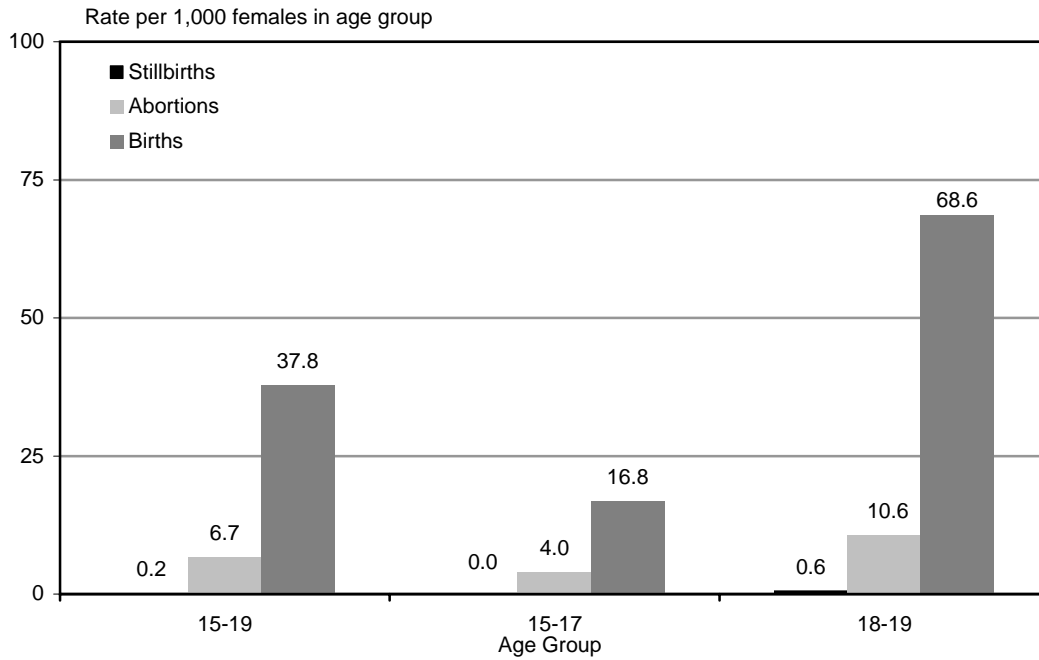

# **TEEN OUT-OF-WEDLOCK BIRTH PERCENTS BY AGE** **U.S.\* and Idaho (Total and White)** **2005**

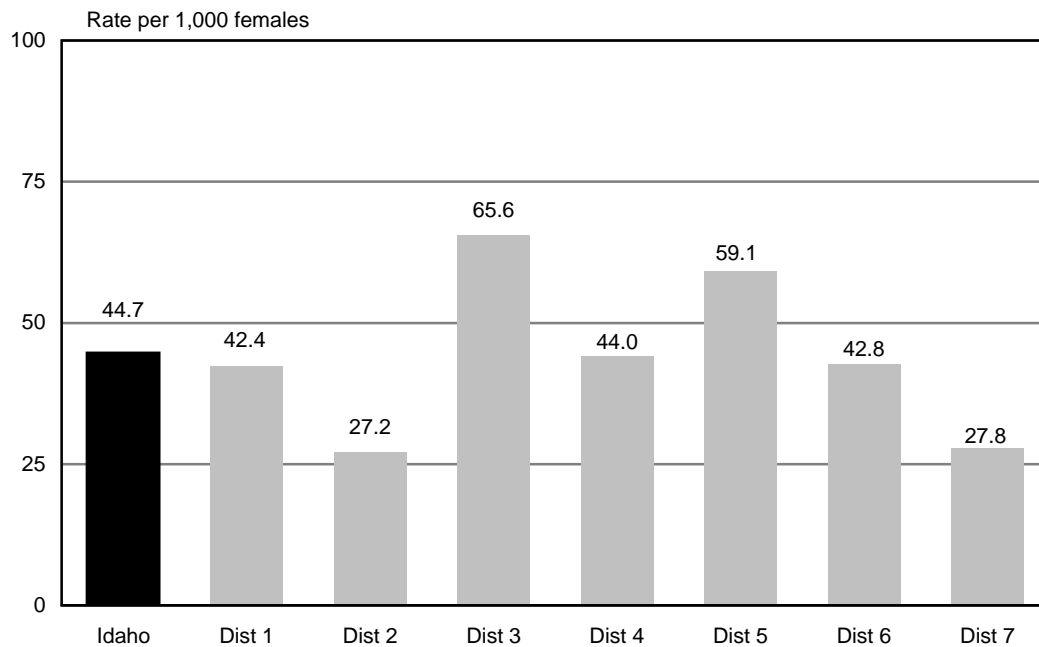

\*U.S. total are preliminary 2005 data; U.S. white are final 2004 data.

\*\*Ratio cannot be computed; no live births. Ratio: Number of induced abortions per 1,000 live births in corresponding age group.

Rate: Number of induced abortions per 1,000 females in corresponding age group. Rates for <15 age group are based on females aged 10-14. Rates are based on July 1, 2005 female population estimates from the National Center for Health Statistics, from the Vintage 2005 postcensal series, prepared under a collaborative arrangement with the U.S. Census Bureau, Internet release date August 16, 2006.

## MORTALITY

### U.S. and Idaho

The number of Idaho deaths increased 5 percent from 10,013 deaths in 2004 to 10,513 deaths in 2005. At the same time, the death rate increased 3 percent (from 7.2 per 1,000 population in 2004 to 7.4 in 2005). There were 2,397,615 deaths in the United States in 2004 which was a 2 percent decrease from 2,448,288 deaths in 2003. The 2004 U.S. crude death rate was 8.2 deaths per 1,000 population compared with 8.4 deaths per 1,000 population in 2003.

### Cause of Death Ranking

The leading causes of death in U.S in 2004 were identical to Idaho's top-two causes in 2005; however, there were differences in the crude rates per 100,000 population. In the U.S., Chronic lower respiratory diseases and Cerebrovascular diseases were ranked in reverse order of Idaho. Diabetes mellitus and Alzheimer's disease were sixth and seventh in the U.S. and were seventh and sixth in Idaho. Suicide ranked ninth in Idaho and eleventh in the U.S. The ninth and tenth leading causes of death in the U.S. were Nephritis, nephrotic syndrome and nephrosis (ninth) and Septicemia (tenth), which were ranked twelfth and seventeenth, respectively in Idaho in 2005.

---

<u>Causes Ranked 1-10 in U.S.</u>	<u>2004 U.S. Crude Rate</u>	<u>2005 Idaho Crude Rate (Rank)</u>
1. Diseases of heart	222.2	170.9 (1)
2. Malignant neoplasms (cancer)	188.6	164.9 (2)
3. Cerebrovascular diseases (stroke)	51.1	49.8 (4)
4. Chronic lower respiratory diseases	41.5	50.3 (3)
5. Accidents	38.1	41.7 (5)
6. Diabetes mellitus	24.9	20.7 (7)
7. Alzheimer's disease	22.5	28.8 (6)
8. Influenza and pneumonia	20.3	20.4 (8)
9. Nephritis, nephrotic syndrome and nephrosis (kidney disease)	14.5	7.4 (12)
10. Septicemia	11.4	4.3 (17)

Crude rates are per 100,000 population.

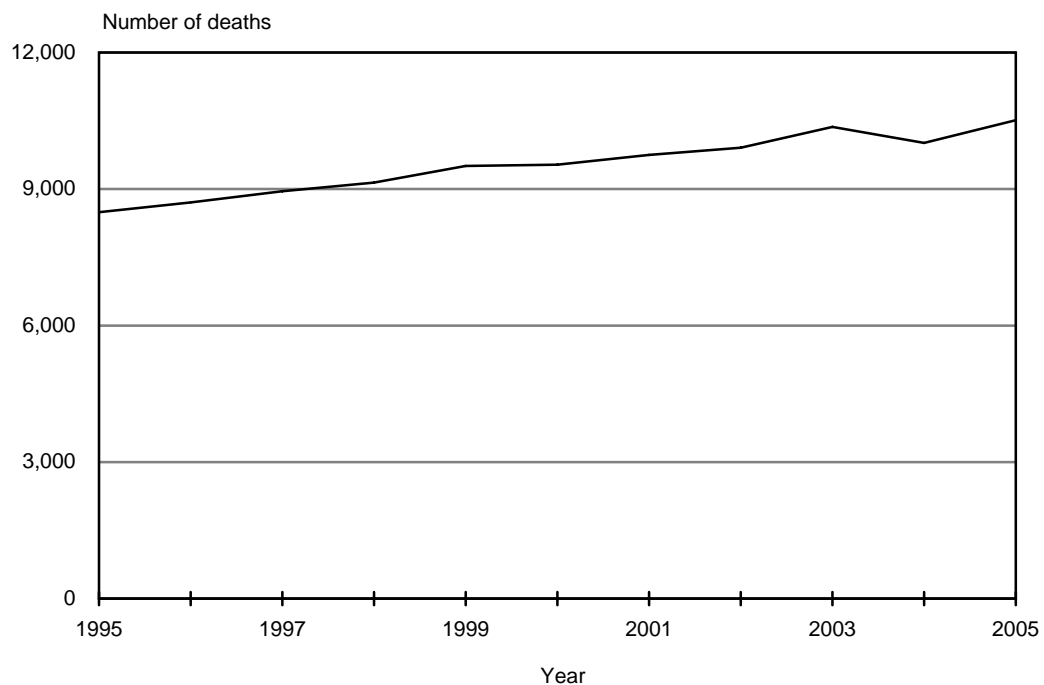

---

U.S. mortality rates are consistently much higher than those in Idaho for Diseases of the heart, Malignant neoplasms, Nephritis, nephrotic syndrome and nephrosis, and Septicemia. Higher Idaho rates are recorded for Intentional self-harm (suicide) and Accidents.

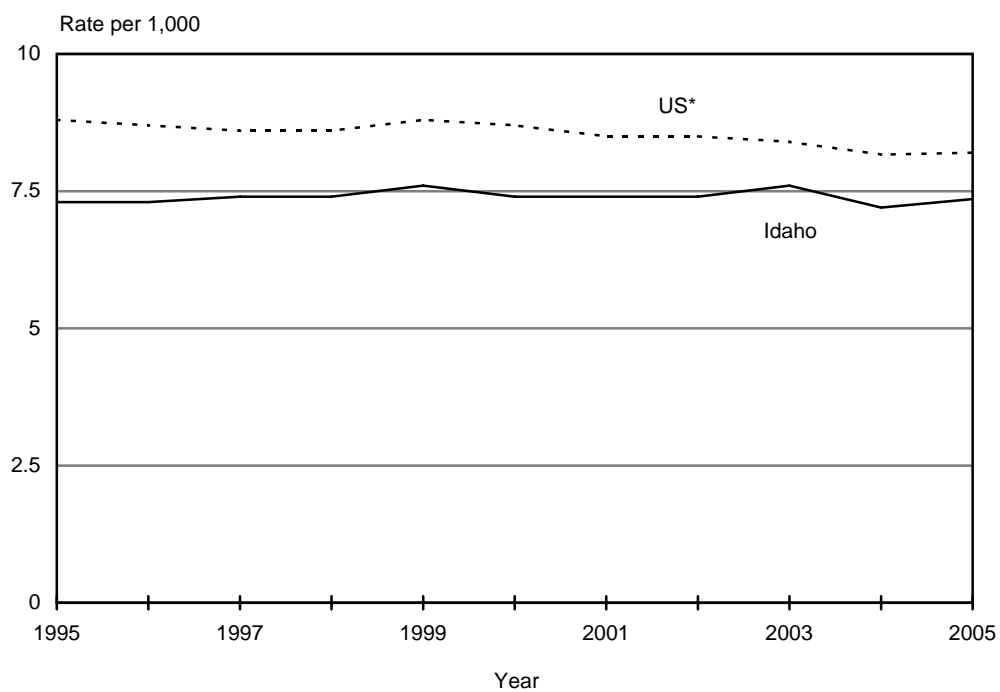

From 2004 to 2005, there were several changes in the ranking of the ten leading causes of death to Idaho residents. Cerebrovascular disease, the third leading cause in 2004 became the fourth leading cause in 2005; Accidents, the fourth leading cause in 2004, became the fifth leading cause in 2005; Chronic lower respiratory diseases, the fifth leading cause in 2004, increased to the third leading cause. Suicide, the eighth leading cause in 2004, dropped to ninth. Influenza and pneumonia, the ninth leading cause in 2004, became the eighth leading cause.

Of the 10 leading causes of death in Idaho, half of the cause-specific death rates increased and half of the cause-specific rates decreased from 2004 to 2005. Increases were seen for Malignant neoplasms, Chronic lower respiratory diseases, Alzheimer's disease, Influenza and pneumonia, and Chronic liver disease and cirrhosis. Crude rates were lower for Diseases of heart, Cerebrovascular diseases, Accidents, Diabetes mellitus, and Intentional self-harm (suicide).

10. Chronic liver disease and cirrhosis	128	1.2%	9.0	9.2	9.0	9.0
All other causes	2,335	22.2%	NA	NA	NA	NA

1. Data are based on tenth revision of the International Classification of Diseases (ICD-10).

2. Rates are per 100,000 population.

3. Age-adjusted rates are artificial measures developed to eliminate the bias inherent in differing age compositions, thus allowing comparisons between geographic regions. Idaho and U.S. age-adjusted rates were calculated using the 2000 U.S. population estimate as the standard population.

4. Idaho rates are based on 2005 population estimates based on 2000 Census.

5. U.S. crude and age-adjusted rates are 2004 final data for leading causes of death and are 2004 preliminary for sub-category causes of death. Rates are calculated using 2004 population estimates based on the 2000 Census.

NA: Age-adjusted rates not calculated for causes with fewer than 20 deaths; crude and age-adjusted rates not applicable for all other causes.

Malignant neoplasm death rate: Number of deaths per 100,000 population.

1. Prostate cancer death rates are expressed as the number of deaths per 100,000 male population.

2. Female breast cancer death rates are expressed as the number of deaths per 100,000 female population.

Rate: Number of deaths per 100,000 population in corresponding group.

**YEARS OF POTENTIAL LIFE LOST BEFORE AGE 75**  
**Firearm Injury, Alcohol-Induced, and Drug-Induced Deaths**  
**2005**

CAUSE OF DEATH	Persons Aged Less than 75 Years		Years of Potential Life Lost (YPLL) Before Age 75		
	Number of Deaths	Percent of Deaths	Average Number of YPLL per Death	Total Number of YPLL	YPLL Rate*
Firearm-Injury	166	3.8%	34.7	5,757	425.8
Alcohol-Induced	126	2.9	20.0	2,515	186.0
Drug-Induced	117	2.7	31.8	3,723	275.3

\* YPLL Rate: Total number of years of potential life lost per 100,000 aged less than 75 years.

Firearm injury, alcohol-induced, and drug-induced deaths are subsets of select causes of death; these death categories are not ranked for leading causes of death.

For definition of firearm injury, alcohol-induced, and drug-induced deaths and information on YPLL, see Technical Notes.

## INFANT, FETAL, AND MATERNAL MORTALITY

### U.S.

The U.S. infant mortality rate decreased from 6.9 in 2003 to 6.8 (preliminary) in 2004<sup>1</sup>; the U.S. provisional rate in 2005 was also 6.8<sup>2</sup>. Except for an increase in the national rate from 6.9 in 2001 to 7.0 in 2002, the infant mortality rate has either decreased or remained level each successive year since 1958. Preliminary 2004 U.S. data indicate the leading cause of infant death in the U.S. was Congenital malformations, deformations and chromosomal abnormalities (birth defects) (136.6 death per 100,000 live births), followed by disorders related to short gestation and low birth weight (113.8 per 100,000 live births), and Sudden infant death syndrome (SIDS) (51.2 per 100,000 live births)<sup>1</sup>.

### Idaho

In the past ten years, Idaho's infant mortality rate fluctuated between record low rates in 2002 (6.1 per 1,000 live births) and a high rate of 7.5 in 2000. In 2005, there were 142 infant deaths and the infant death rate was 6.2 per 1,000 live births. Considering the small size of the data base, some irregularity is not unusual. The graph on the following page illustrates the trend of Idaho's infant death rates as a one- to two-year "up-and-down" cycle.

Neonatal and postneonatal death rates also produce yearly changes in Idaho. The neonatal mortality rate (infant deaths less than 28 days) in 2005 remained the same as the rate in 2004 (4.0); the postneonatal rate (infant deaths from 28 days through 11 months) decreased slightly from 2.2 in 2004 to 2.1 in 2005.

Infant mortality rates were highest in northern Idaho in 2005. District 2 experienced the highest infant mortality rate in 2005 at 7.9 followed by District 1 (7.4). District 7 had the lowest rate in 2005 (3.9). Neonatal mortality ranged from a low of 2.8 deaths per 1,000 births in District 5 to a high of 5.4 deaths per 1,000 births in District 3; the postneonatal mortality was lowest in District 7 (0.8) and highest in District 2 (4.4).

Because Idaho infant deaths provide a small data base that tends to fluctuate or produce abnormally high rates in small counties, moving three-year rates have been calculated. See page 107 for three-year infant mortality rates by district and county, from 1994-1996 through 2003-2005; the overall trend is more readily apparent.

### Leading Causes of Infant Death

In 2005, there were 59 deaths for the general infant death category, "Certain conditions originating in the perinatal period." This category includes such conditions as short gestation and low birth weight, respiratory distress of newborn, and neonatal hemorrhage. In ranking the leading causes of infant deaths, however, the conditions within this general category are used to determine leading causes of death, rather than the general category. The leading cause of Idaho infant deaths was Congenital malformations, deformations and chromosomal abnormalities (birth defects) (41 deaths; 177.8 deaths per 100,000 births). Overall, disorders related to short gestation and low birth weight was the second leading cause of death (21 deaths; 91.1 deaths per 100,000 births), and Sudden infant death syndrome (12 deaths; 52.0 deaths per 100,000 births) was the third leading cause of infant death.

1. "E-Stats Deaths: Final Data for 2004," <http://www.cdc.gov/nchs>, National Center for Health Statistics, Released November, 2006.  
2. "Births, Marriages, Divorces, and Deaths: Provisional Data for 2005," [National Vital Statistics Reports](#), National Center for Health Statistics, Vol. 54, No. 20, July 21, 2006.

The leading single cause of neonatal mortality was Congenital malformations, deformations and chromosomal abnormalities (birth defects), with a neonatal death rate of 138.7 per 100,000 live births. SIDS was the leading single cause of death in the postneonatal period at 52.0 deaths per 100,000 live births and accounted for 24.5 percent of all postneonatal deaths.

### **Stillbirths and Perinatal Deaths**

Idaho reportable stillbirth deliveries are defined as a spontaneous fetal death of twenty (20) completed weeks gestation or more, based on a clinical estimate of gestation, or a weight of three hundred fifty (350) grams (12.35 ounces) or more. In 2005 there were 134 stillbirths to Idaho residents; the ratio of stillbirths to live births was 5.8 stillbirths per 1,000 live births. From 2001 to 2005, the stillbirth ratio ranged from a low of 4.9 per 1,000 live births in 2002 to a high of 6.3 per 1,000 live births in 2001.

Perinatal death is defined as the number of stillbirths plus the number of deaths to infants under seven (7) days of age per 1,000 live births. In 2005, there were 217 perinatal deaths to Idaho residents. The perinatal death ratio from 2004 to 2005 increased 3.2 percent from 9.1 per 1,000 live births to 9.4 per 1,000 live births in 2005.

In 2006, additional stillbirth records were forwarded to Idaho from Utah and Washington for the years 1993 to 2004. The Idaho data bases were revised to include these additional records and the stillbirth and perinatal death numbers and ratios in the 2005 annual report include these additional records.

### **Maternal Deaths**

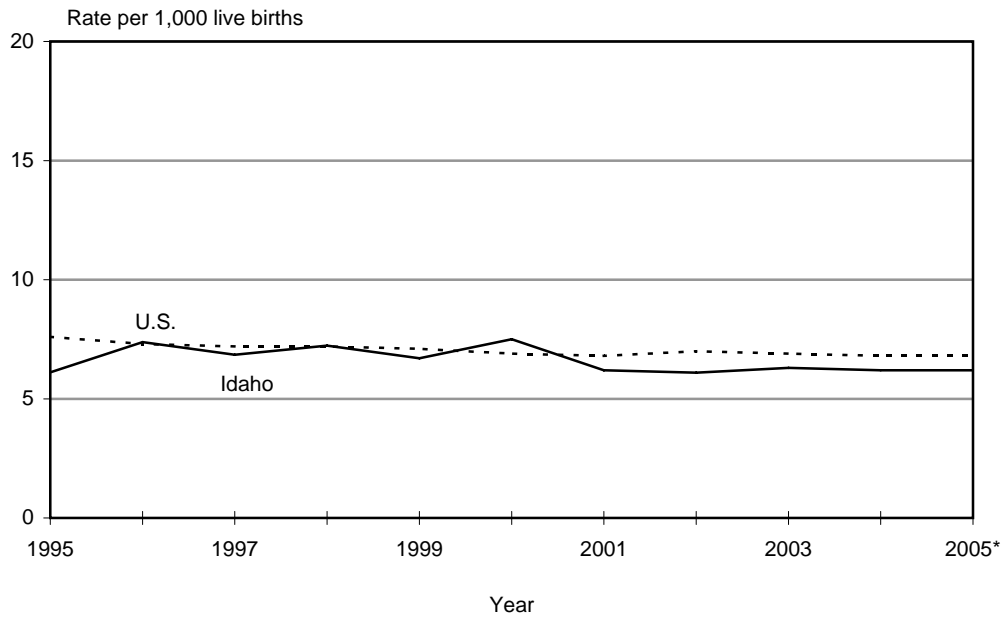

Maternal causes of death include pregnancies with an abortive or live outcome and include direct and indirect obstetric causes and complications. The World Health Organization defines maternal death as "the death of a woman while pregnant or within 42 days of termination of pregnancy, irrespective of the duration and the site of the pregnancy, from any cause related to or aggravated by the pregnancy or its management, but not from accidental or incidental causes."<sup>1</sup>

In 2003, the Idaho death certificate was revised to include a separate question regarding pregnancy status of females aged 10 to 54. Data are reported if female was pregnant at time of death, within 42 days of death, or 43 to one year prior to death. Data from the response to this question are used in conjunction with cause of death information reported in Part I and Part II on the death certificate to determine the underlying cause of death (ICD-10 code). The separate pregnancy status question on the death certificate resulted in the identification of more maternal deaths in states with the revised death certificate<sup>1</sup>. Idaho data for 2003 and later are not comparable to Idaho data prior to 2003.

In 2005, there were six maternal deaths to Idaho residents (death rate of 26.0 per 100,000 live births). The ICD-10 codes used for maternal deaths are A34, O00-O95, and O98-O99<sup>1</sup>. In addition to the six maternal deaths during pregnancy or within 42 days of termination of pregnancy, there were two deaths to women due to pregnancy, childbirth, and the puerperium which occurred more than 42 days after delivery or termination of pregnancy. The ICD-10 codes used for these deaths are O96-O97 and these deaths are not included in the count or the rate for maternal deaths.

Perinatal death ratio: Number of stillbirths plus deaths of infants under 7 days of age per 1,000 live births.

\* In 2006, additional stillbirth reports were forwarded from Washington and Utah for Idaho residents who had stillbirths in these states from 1993 to 2004. The Idaho data bases were revised with these additional records; data in this table are revised for 2001-2004.

## INDUCED ABORTION

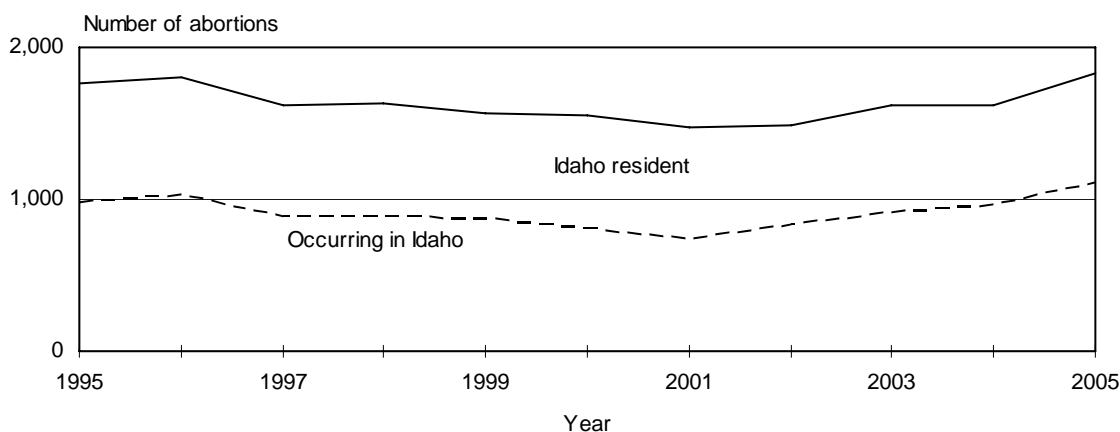

In 2003, 49 reporting areas out of 52 reporting areas, (50 States, District of Columbia, and New York City), provided data to the Centers for Disease Control and Prevention (CDC) regarding abortions in the U.S. A total of 848,163 legal abortions were reported to the CDC by 49 reporting areas in 2003 (latest year U.S. data are available). In 2003, the U.S. abortion ratio (reported abortions per 1,000 live births) was 241. The number of abortions in 2003 represents a slight decrease from 2002, for which 854,122 abortions were reported from the same 49 reporting areas.

	INDUCED ABORTIONS	RATIO PER 1,000 LIVE BIRTHS	RATE PER 1,000 FEMALES AGED 15-44
U.S. 2003 <sup>1</sup>	848,163	241	16
Idaho 2005 (Occurrence)	1,099	48	4
Idaho 2005 (Residence)	1,827	79	6

The reporting of induced abortions occurring in Idaho has been required by state statute since July 1, 1977. The reported numbers increased from 708 during the last half of 1977 to a high of 2,706 in 1981. The number of abortions reported in Idaho in 2005 was 1,099, a 14 percent increase from the 963 reported in 2004. Abortions occurring in Idaho may be to Idaho residents or non-residents. Of the 1,099 abortions performed in Idaho, 1,065 were to residents of Idaho and 34 were to non-residents.

Abortions to Idaho residents increased 13 percent, from 1,618 in 2004 to 1,827 in 2005. Abortions to Idaho residents may occur in Idaho or out of state. In 2005, 1,065 abortions to Idaho residents occurred in Idaho and 762 were performed out of state. Of the 762 abortions obtained by Idaho residents out of state, 591 were performed in Washington, 104 in Utah, 45 in Oregon, 20 in Montana, and 1 each in South Dakota and Texas.

### IDAHO INDUCED ABORTIONS Idaho Residents and Abortions in Idaho 1995-2005

1. Number of induced abortions per 1,000 live births.

2. Race and Hispanic origin are reported separately on the abortion report. Women of Hispanic origin are included in appropriate race totals.

In 2005, there were 123 records with Hispanic origin not stated; therefore, counts for Hispanics may be underreported.

Percents based on records with stated number of previous induced abortions or number of living children.

## MARRIAGE AND DIVORCE

The number of marriages occurring in Idaho decreased slightly from 14,997 in 2004 to 14,933 in 2005. This follows a 1 percent increase from 2003 to 2004. Although the number of marriages that occurred in Idaho in 2005 was slightly lower than occurred in the state ten years ago, the marriage rate declined 20 percent from 13.0 per 1,000 population in 1995 to 10.4 in 2005 due to a greater increase in the population. However, marriages occur at a higher frequency in Idaho than in the U.S. as a whole; the provisional 2005 U.S. marriage rate was 7.5, which was a 1 percent increase from 7.4 (provisional) in 2004. Much of the difference between Idaho and U.S. rates can be accounted for by the high number of nonresidents who marry in northern Idaho.

The number of divorces occurring in Idaho increased 3 percent from 6,921 in 2004 to 7,118 in 2005. The divorce rate remained the same, 5.0 per 1,000 population, for 2004 and 2005, which is the lowest rate since 1971, when the rate was 5.0. Like marriages, divorces occur more frequently in Idaho than in the remainder of the nation; the 2005 U.S. divorce rate was 3.6 (provisional), down 3 percent from the 2004 provisional rate of 3.7.

## TECHNICAL NOTES

### Nativity

#### Revision of the Certificate of Live Birth

The U.S. Standard Certificate of Live Birth was revised in 2003. In 2003, Pennsylvania and Washington were the first two states to implement the 2003 revision. In 2004, Idaho implemented the 2003 U.S. Standard Certificate of Live Birth. Some items on the certificate were added or changed from previous years and some items were removed from the Idaho certificate in 2004.

##### New Items:

- Mother's height
- Mother's prepregnancy weight and weight at delivery
- Date of first prenatal care visit
- Date of last prenatal care visit
- Did mother get WIC food for herself during this pregnancy?
- Is infant being breastfed?
- Apgar score at 10 minutes
- Infant living at time of report

##### Revised Items:

- Mother's and father's race
- Mother's and father's ethnicity
- Mother's and father's education
- Cigarette smoking before and during pregnancy
- Principal source of payment for delivery
- Risk factors in this pregnancy
- Infections present and/or treated during this pregnancy
- Obstetric procedures
- Characteristics of labor and delivery
- Method of delivery
- Maternal morbidity (complications of labor and delivery)
- Abnormal conditions of the newborn
- Congenital anomalies of the newborn

##### Removed items:

- Month prenatal care began
- Alcohol use during pregnancy
- Weight gain during pregnancy
- Apgar score at 1 minute

Not all states have revised their birth certificate to the 2003 U.S. Standard Certificate. For births to Idaho residents delivered in states with unrevised certificates, unknown and non-compatible data were entered as "not stated" in the Idaho data base. For data analysis, only records with known data were used to calculate percents and means.

## Overview of New and Revised Items

### Height and weight of mother

The 2004 certificate collected data on the mother's height, prepregnancy weight, and weight at delivery for the first time. Previously, the certificate only asked for mother's weight gain during pregnancy. Height and weight information are needed to calculate maternal body mass index (BMI).

### Date of first prenatal care visit

In 2004, the prenatal care item was revised from collecting month prenatal care began to collecting date of first prenatal care visit. With the revision, the calculation of trimester prenatal care began is based on date of the first prenatal care visit and the date of the last menstrual period (LMP). If LMP date is not stated, the date of first prenatal care visit, the clinical length of gestation in weeks, and the baby's birth date are used to estimate the onset of prenatal care. If the day of first prenatal visit is missing, the day is imputed for statistical purposes based on the previous birth record with the same month of first prenatal care visit. If either month or year of prenatal care is missing or implausible, date of visit is coded to unknown.

According to the National Center for Health Statistics (NCHS), the change in data collection yields more accurate data because the timing for care is based on a date in the mother's medical record rather than based on mother's recollection of month of first visit<sup>1</sup>. Because of the changes in sources for these data, prenatal care based on date of first visit is not comparable to prenatal care based on month prenatal care began.

### Did mother get WIC food for herself during this pregnancy?

WIC is the Idaho Health and Welfare program for women, infants, and children that provides nutritional education, monetary checks for food, and health referrals. Data on WIC from the birth certificate may differ from data from the WIC Program.

### Is infant being breastfed?

The NCHS recommended adding this item to the birth certificate because the information is important for the Maternal and Child Health program to track breast feeding levels. Data are based on infant being breastfed at the time of birth through the time the birth certificate is completed.

### Apgar score

The Apgar score was developed in the 1950s by Virginia Apgar, M.D., as a means of evaluating the physical condition of the infant after birth. The score is calculated by assessing five signs of the infant at birth and designating the score of 0, 1, or 2 for each sign. The five signs checked are heart rate, respiratory effort, muscle tone, reflex irritability, and color. The Apgar score is the sum of these five values and ranges from 0 to 10, with 10 being optimum. A score of 0-3 indicates an infant in need of resuscitation; a score of 4-6 is considered intermediate; a score of 7-10 indicates good to excellent physical condition<sup>2</sup>.

Data items on apgar scores were revised in 2004. The one-minute apgar score was removed from the Idaho birth certificate; the five-minute apgar remained, and the ten-minute apgar was added. The ten-minute apgar is to be completed only for infants with five-minute apgar less than six.

### Infant living at time of report

If infant is not living at time of report, there is follow-up at the Bureau of Health Policy and Vital Statistics to obtain a matching infant death certificate from the state of death.

### Mother's and father's race

Beginning in 2004, parents may choose multiple races on the Idaho birth certificate. In 2005, there were 241 in-state births and nine out-of-state births in which the mother reported more than one race. For statistical analysis, Idaho birth records with more than one race were provided to the National Centers for Health Statistics (NCHS) for NCHS to re-code and provide the bridged-race codes back to Idaho for in-state births. However, bridged-race codes are not provided to Idaho for out-of-state births. Idaho resident birth data provided in the table on page 33 entitled "Idaho Resident Births by Race of Mother and Residence, 2005" are based on single-race and bridged-race categories for births in Idaho and single-race categories for births out of state. The nine out-of-state births with multiple race of mother in 2005 are included in the total number of births, but are not shown in the table.

Year	Births to Idaho Mothers in Idaho			Births to Idaho Mothers Out of State		
	Total	Single Race	Multiple Race	Total	Single Race	Multiple Race
2004	21,398	21,185	213	1,131	1,126	5
2005	21,974	21,733	241	1,090	1,081	9

Prior to 2004, mother's and father's race was written on the birth certificate. For statistical analysis, races listed on the certificate were collapsed into five race categories: White, Black, American Indian or Alaskan Native, Asian or Pacific Islander, or "other race". In 2004, the birth certificate was revised to include check boxes for races and parents had the ability to select one or more race. At the same time, the race category structure was revised. Prior to use of check boxes, write-ins of "Hispanic" or "Mexican" for race were coded to white. Beginning with 2004 births, check boxes of "other race" with write-ins of "Hispanic" or "Mexican" were coded to "other race". Therefore, race data in 2004-2005 are not comparable with race data for births prior to 2004.

Bridged Race of Mother	2003 Live Births	2004 Live Births	2005 Live Births
White	20,721	20,795	21,117
Black	104	101	133
Native American	361	372	383
Asian or Pacific Islander	344	294	364
Other race	13	670	791
Race not stated	251	292	267

Because of the bridged-race code rules implemented in 2004, there was a large increase in the number of Idaho resident mothers with race coded to "other race" in 2004-2005. Nearly 95 percent of the records to mothers with race coded to "other race" were of Hispanic ethnicity.

### Mother's and father's ethnicity

The 2004 Idaho certificate includes check boxes for Hispanic origin and allows the mother and father to choose more than one Hispanic origin. Origin is then categorized as Hispanic or non-Hispanic. Race and Hispanic origin are reported separately on the birth certificate. Data shown for Hispanic mothers may be of any race.

### Mother's and father's education

The 2004 birth certificate was revised to report the highest degree or level of school completed at delivery. Prior to 2004, education was reported as years of school completed. Because of this change, data in 2005 are not comparable with data prior to 2004. For birth occurring out of state in states with unrevised birth certificates, years of schooling were entered as close as possible to highest level of school completed.

Number of Years Schooling Conversion to Highest Degree or Level of School Completed	
Number of Years Schooling	Highest Level of School Completed
0-8 years	8 <sup>th</sup> grade or less (includes none)
9-11 years	9 <sup>th</sup> – 12 <sup>th</sup> grade, but no diploma
12 years	High school graduate or GED completed
13-15 years	Some college credit, but no degree, includes associate's degree
16 years	Bachelor's degree
17 or more years	Master's, doctorate or professional degree

### Cigarette smoking before and during pregnancy

Prior to 2004, tobacco use during pregnancy (yes or no) and average number of cigarettes per day were reported on the birth certificate. Beginning in 2004, the Idaho birth certificate includes four data items for cigarette smoking before and during pregnancy. The revised certificate collects data on average number of cigarettes smoked per day during the three months before pregnancy, the first three months of pregnancy, the second three months of pregnancy, and the third three months of pregnancy. For births occurring out of state in states with unrevised certificates, if mother used tobacco during pregnancy, the birth record was coded to mother smoked cigarettes during all three trimesters of pregnancy. There were 34 records in 2005 in which mother smoked during pregnancy and birth occurred in a state which does not ask for cigarette smoking data by trimester of pregnancy. Data for cigarette smoking prior to pregnancy were not collected on the unrevised certificate and were coded to "not stated" for data analysis.

Data based on mother's cigarette smoking status during the three trimesters of pregnancy were used to generate a data item for mother smoking during pregnancy. Mother's who smoked during the first three months of pregnancy, the second three months of pregnancy, or the third three months of pregnancy were coded to "yes" smoked cigarettes during pregnancy for data analysis. Because of changes in the method data are collected for smoking during pregnancy, Idaho data for 2004-2005 are not comparable with Idaho data prior to 2004 or other data based on tobacco use during pregnancy.

### Medical and health section

The medical and health section for mother includes risk factors in this pregnancy, infections present and/or treated during this pregnancy, obstetric procedures that applied to this pregnancy, onset of labor, characteristics of labor and delivery, method of delivery, and maternal morbidity (complications of labor and delivery). The medical and health section for the infant includes abnormal conditions of the newborn and congenital anomalies of the newborn. There were extensive changes for each of these items on the revised certificate. Every effort was made to code information for births born out of state in states with unrevised certificates to the appropriate data item in the Idaho data base.

### Risk factors in this pregnancy

Definitions of risk factors in this pregnancy are provided by the Centers for Disease Control and Prevention (CDC), NCHS<sup>3</sup>.

*Prepregnancy diabetes* – Glucose intolerance requiring treatment diagnosed prior to this pregnancy.

*Gestational diabetes* - Glucose intolerance requiring treatment diagnosed during this pregnancy.

*Prepregnancy hypertension* – Elevation of blood pressure above normal for age, gender, and physiological condition diagnosed prior to the onset of this pregnancy.

*Gestational hypertension* - Elevation of blood pressure above normal for age, gender, and physiological condition diagnosed during this pregnancy.

*Previous preterm birth* – History of pregnancy(ies) terminating in a live birth of less than 37 completed weeks of gestation.

*Other previous poor pregnancy outcome* – History of pregnancy(ies) with fetal and neonatal death, small for gestational age, and/or intrauterine growth restricted birth.

*Vaginal bleeding during pregnancy* – Any reported or observed bleeding per vaginum at any time in the pregnancy presenting prior to the onset of labor.

*Infertility treatment*- Any assisted reproduction technique whether artificial insemination, drugs, or any technical procedures (in-vitro fertilization) used to initiate the pregnancy.

*Previous cesarean delivery* - Previous operative delivery in which the fetus is extracted through an incision in the maternal abdominal and uterine walls.

### Infections present and/or treated during this pregnancy

The revised U.S. birth certificate includes six infections which are known to cause concomitant fetal and/or subsequent neonatal infection. The infections listed on the U.S. revised certificate are Gonorrhea, Syphilis, Herpes Simplex Virus (HSV), Chlamydia, Hepatitis B, and Hepatitis C. In addition to the infections listed on the revised U.S. certificate, the Idaho birth certificate includes HIV, Listeria, group B streptococcus, Cytomegalovirus, Parvovirus, and Toxoplasmosis. The CDC provides more information on these infections at <http://www.cdc.gov/>.

*Gonorrhea* - Infection due to *Neisseria gonorrhoeae* transmitted sexually (a STD) in most cases, but also by contact with infected exudates in neonatal infants at birth.

*Syphilis* - A subacute to chronic infectious disease caused by the spirochete *Treponema pallidum*, which is usually transmitted sexually or acquired in utero.

*HIV (Human immunodeficiency virus)* – HIV is the virus that causes AIDS (acquired immune deficiency syndrome). HIV may be transmitted sexually or through infected blood or contact with an infected person's broken skin or mucous membranes. In addition, infected pregnant women can pass HIV to their baby during pregnancy or delivery, as well as through breast-feeding.

*Herpes Simplex Virus (HSV)* – Infection of the skin on the genital area by herpes simplex virus and is transmitted sexually.

*Chlamydia* - A disease transmitted sexually that is caused by the bacterium *Chlamydia trachomatis*.

*Listeria* - A genus of bacteria of uncertain affiliation, closely resembling those of the family *Corynebacteriaceae*, made up of small, coccoid gram-positive rods that have a tendency to form chains and palisades; they are found in the feces of humans and other animals, on vegetation, and in silage.

*Group B Streptococcus (GBS)* - A type of bacteria that can cause serious illness and death in newborns. Group B streptococcus is the most common cause of sepsis (blood infection) and meningitis (infection of the fluid and lining around the brain) in newborns. It is not spread by the consumption of water or food or transmitted sexually.

*Cytomegalovirus (CMV)* – A common virus of the subfamily *Betaherpesvirinae* that can be present in the body without causing infection. It is spread from person to person by contact with urine, saliva, breast milk, blood, semen, and possibly other body fluids. The virus can be spread from an infected mother to her fetus or newborn baby.

*Parvovirus* - Parvovirus B19 is a virus that commonly infects humans; about 50 percent of all adults have been infected sometime during childhood or adolescence. Parvovirus B19 infects only humans. There are also animal parvoviruses, but they do not infect humans. Therefore, a person cannot catch parvovirus B19 from a dog or cat.

*Toxoplasmosis* - A disease caused by a single-cell parasite called *Toxoplasma gondii*. The *Toxoplasma* infection could cause serious health problems in pregnant women. *Toxoplasma* infection occurs from contaminated food or drinking water and cat feces from a *Toxoplasma*-infected cat. Most infants are infected while still in the womb. They have no symptoms at birth, but they may develop symptoms later in life.

*Hepatitis B (HBV)* - A serious disease caused by a virus that attacks the liver. This virus can cause lifelong infection, cirrhosis (scarring) of the liver, liver cancer, liver failure, and death. The Hepatitis virus may be transmitted sexually, through contaminated blood, or from infected mothers to their infants at birth.

*Hepatitis C* - A disease caused by the Hepatitis C virus which results in infection of the liver. The Hepatitis C virus is spread by contact with contaminated blood or plasma. The role of person-to-person contact and sexually transmission is unclear, but it may be transmitted from an infected mother to her baby during birth.

#### Characteristics of labor and delivery

Characteristic of labor and delivery include information about the course of the delivery. Definitions of characteristics of labor are provided by the CDC, NCHS<sup>3</sup>.

*Induction of labor* - Initiation of uterine contractions by medical and/or surgical means for the purpose of delivery before the spontaneous onset of labor.

*Augmentation of labor* - Stimulation of uterine contractions by drug or manipulative technique with the intent to reduce the time to delivery.

*Non-vertex presentation* - Includes any non-vertex fetal presentation, e.g., breech, shoulder, brow, face presentations, and transverse lie in the active phase of labor or at delivery other than vertex.

*Steroids (glucocorticoids) for fetal lung maturation* - Steroids received by the mother prior to delivery including betamethasone, dexamethasone, or hydrocortisone specifically given to accelerate fetal lung maturation in anticipation of preterm delivery. Excludes steroid medication given to the mother as an anti-inflammatory treatment.

*Antibiotics during labor* - Includes antibacterial medications given systemically (intravenous or intramuscular) to the mother in the interval between the onset of labor and the actual delivery.

*Chorioamnionitis or Maternal temp. >100.4 degrees F* - A clinical diagnosis of chorioamnionitis during labor made by the delivery attendant. Usually includes more than one of the following: fever, uterine tenderness and/or irritability, leukocytosis, and fetal tachycardia.

*Moderate/heavy meconium staining of amniotic fluid* - Staining of the amniotic fluid caused by passage of fetal bowel contents during labor and/or delivery which is more than enough to cause a greenish color change of the fluid.

*Fetal intolerance of labor* - In-utero resuscitation measure (maternal position change, oxygen administration to the mother, IV fluid, amnioinfusion, support of maternal blood pressure, uterine relaxing agents), further fetal assessment (scalp pH, scalp stimulation, acoustic stimulation), operative delivery/intervention to shorten time to deliver the fetus.

*Epidural or spinal anesthesia during labor* - Administration of a regional anesthetic to the mother for control of the pain of labor, i.e., delivery of an agent into a limited space with the distribution of the analgesic effect limited to the lower body.

*Maternal morbidity (complications of labor and delivery)*

Maternal morbidity includes serious complications experienced by the mother associated with the labor and delivery. Definitions of maternal morbidity are provided by the CDC, NCHS<sup>3</sup>.

*Maternal transfusion* - Includes infusion of whole blood or packed red blood cells within the period specified.

*Third or fourth degree perineal laceration* - Third degree laceration extends completely through the perineal skin, vaginal mucosa, perineal body, and anal sphincter. Fourth degree laceration is all of the above with extension through the rectal mucosa.

*Ruptured uterus* - Tearing of the uterine wall.

*Unplanned hysterectomy* - Surgical removal of the uterus that was not planned prior to admission for delivery. Includes an anticipated or possible but not definitively planned procedure.

*ICU admission* - Any admission, planned or unplanned, of the mother to a facility/unit designated as providing intensive care (ICU).

*Unplanned operating room procedure following delivery* - Any transfer of the mother back to a surgical area for an operative procedure that was not planned prior to the admission for delivery. This complication excludes postpartum tubal ligations.

### Abnormal conditions of the newborn

Abnormal conditions of the newborn include disorders or significant morbidity experienced by the newborn infant. Definitions of abnormal conditions are provided by the CDC, NCHS<sup>3</sup>.

*Assisted ventilation required immediately following delivery* - Infant given manual breaths with bag and mask or bag and endotracheal tube within the first several minutes from birth for any duration.

*Assisted ventilation required for more than six hours* – Infant given mechanical ventilation (breathing assistance) by any method for more than six hours.

*Seizure or serious neurologic dysfunction* - Seizure defined as any involuntary repetitive, convulsive movement or behavior. Serious neurologic dysfunction defined as severe alteration of alertness such as obtundation, stupor, or coma.

*Significant birth injury* (injury present immediately following delivery or manifesting following delivery) - Any bone fracture or weakness or loss of sensation. This condition excludes fractured clavicles and transient facial nerve palsy.

*NICU admission* – NICU (neonatal intensive care unit) is defined as a facility or unit staffed and equipped to provide continuous mechanical ventilatory support for the newborn. The infant may require additional or other medical support in an NICU than continuous mechanical ventilatory support.

*Newborn given surfactant replacement therapy* - Treatment of surfactant deficiency either due to preterm birth or pulmonary injury resulting in decreased lung compliance.

*Antibiotics received by the newborn for suspected neonatal sepsis* - Any antibacterial drug given systemically.

*Failed newborn hearing test* - Failure of the newborn hearing screening test in one or both ears. Data are based on infants given the test in which test results were available prior to the birth certificate being filed with the state. Newborn hearing screening tests may vary by birth facility.

### Congenital anomalies of the newborn

Anomalies which are diagnosable within the first 24 hours following birth using widely available conventional diagnostic techniques. Definitions are provided by the CDC, NCHS<sup>3</sup>.

*Anencephaly* - Absence of the cerebral hemispheres.

*Meningomyelocele/spina bifida* - Developmental anomaly characterized by defective closure of the bony encasement of the spinal cord, through which the cord and meninges may or may not protrude.

*Cyanotic congenital heart disease* - Congenital heart defects which cause cyanosis. Includes, but is not limited to, transposition of the great arteries, teratology of Fallot, pulmonary or pulmonic valvular atresia, tricuspid atresia, truncus arteriosus, and total or partial anomalous pulmonary venous return with or without obstruction.

*Congenital diaphragmatic hernia* - Defects in the formation of the diaphragm allowing herniation of abdominal organs into the thoracic cavity.

*Omphalocele* - Protrusion of variable amounts of abdominal viscera from a midline defect at the base of the umbilicus.

*Gastroschisis* - The abdominal viscera protrude through an abdominal wall defect, usually on the right side of the umbilical cord insertion.

*Limb reduction defect* - Complete or partial absence of a portion of an extremity secondary to failure to develop. Congenital amputation and dwarfing syndromes are excluded.

*Cleft lip with or without cleft palate* - Refers to incomplete closure of the lip. Cleft lip may be unilateral, bilateral, or median.

*Cleft palate alone* - Refers to incomplete fusion of the palatal shelves. This may be limited to the soft palate or may also extend into the hard palate.

*Down syndrome (karyotype confirmed and karyotype pending)* - The most common chromosomal defect, with most cases resulting from an extra chromosome (Trisomy 21).

*Suspected other chromosomal disorder (karyotype confirmed and karyotype pending)* - Includes any constellation of congenital malformations resulting from or compatible with known syndromes caused by detectable defects in chromosome structure.

*Hypospadias* – Congenital malformations of genital organs.

#### Method of delivery

In 2004, the Idaho birth certificate was revised to collect additional data for cesarean births. The revised certificate asks for two additional data items regarding cesarean deliveries, 1) was a trial of labor attempted, and 2) number of previous cesarean deliveries.

The formulas for calculating rates by method of delivery are based on mother's delivery history. For mothers with no previous deliveries or with a previous vaginal delivery, the method of delivery for this birth will either be vaginal or primary cesarean. For women with a previous cesarean delivery, the method of delivery for this birth will either be vaginal birth after cesarean (VBAC) or repeat cesarean.

*Vaginal, non-VBAC rate*: Number of vaginal, non-VBAC deliveries per 100 births. Rate is based on records with known data for method of delivery.

Formula:  $[(\text{vaginal, non-VBAC births}) / (\text{total births} - \text{births with unknown method of delivery})] \times 100$

*Vaginal birth after previous cesarean (VBAC) rate*: Number of vaginal deliveries per 100 births to women with a previous cesarean.

Formula:  $[(\text{VBAC births}) / (\text{VBAC births} + \text{repeat cesarean births})] \times 100$

*Total cesarean rate*: Number of cesarean deliveries per 100 births. Rate is based on records with known data for method of delivery.

Formula:  $[(\text{total cesarean births}) / (\text{total births} - \text{births with unknown method of delivery})] \times 100$

*Primary cesarean rate*: Number of cesarean deliveries per 100 births to women who had no previous cesareans. Rate is based on records with known data for method of delivery.

Formula:  $[(\text{primary cesarean births}) / (\text{total births} - \text{VBAC's} - \text{repeat cesareans} - \text{births with unknown method of delivery})] \times 100$

*Repeat cesarean rate*: Number of cesarean deliveries per 100 births to women with a previous cesarean.

Formula:  $[(\text{repeat cesarean births}) / (\text{repeat cesarean births} + \text{VBAC births})] \times 100$

### Principal source of payment for delivery

In 2004, the Idaho birth certificate included eight check boxes for the principle source of payment for this delivery: private insurance, Medicaid, self-pay, Indian Health Services, CHAMPUS/TRICARE, other government, other, and none. If no check box was selected, payment source was coded to “not stated”. For data analysis, records with Indian Health Services, CHAMPUS/TRICARE, or other government selected were categorized as “other government”. Principal source for payment was added to the Idaho certificate in 1996. The categories listed from 1996 to 2003 were: HMO, self-pay, other health insurance, Medicaid, and other government. Data from 1996 to 2003 are not comparable with 2004-2005 data for payment source for delivery. Data for Medicaid-paid births from the birth certificate may not match data from the Medicaid Program. In addition, the principal source for payment may change after the certificate is filed with the state.

## **Mortality**

### **Revision of the Certificate of Death**

A new U.S. Standard Certificate of Death was implemented on January 1, 2003 and at that time five states including Idaho implemented the revision within their states. The revision of the death certificate included three new data fields relating to the cause of death:

- 1) Did tobacco use contribute to the death?
- 2) What was the pregnancy status of females aged 10-54?
- 3) What type of safety device(s) did decedent use/employ (transportation deaths)?

In addition to the new variables, there were notable changes to existing data fields. One was a revision to the manner in which decedent’s education is collected. Prior to 2003, data collected for decedent’s education were based on number of years of school; beginning in 2003, data are based on the education level that best describes the highest degree or level of school completed at time of death.

Another notable change to the death certificate in 2003 was on decedent’s race and ethnicity. In 2003, the Idaho death certificate was revised to allow for more than one race and more than one Hispanic origin of the decedent. To facilitate coding and processing of multiple-race data in a uniform manner for all vital statistics jurisdictions, the National Center for Health Statistics (NCHS) developed a computer system to code and edit reported race and ethnicity data.

### Race of decedent

Beginning in 2003, Idaho Vital Statistics transmitted Idaho death records to NCHS, NCHS re-coded multiple-race categories to single-race codes; NCHS returned the records back to Idaho for analysis. The data used for analysis was the “bridged-multiple race” code on each death certificate. The bridging procedure is similar to the procedure used to bridge multiracial population estimates. For Idaho death certificates, multiracial decedents are imputed to a single race using a coding algorithm according to their combination of races, Hispanic origin, sex, and age indicated on the death certificate. The categories for the bridged race codes are the four main categories used by NCHS – White, Black, American Indian or Alaskan Native, Asian or Pacific Islander. In addition, there is a fifth category in Idaho for “other race of decedent”.

The imputation of multiple-race to single-race procedure is described at the CDC's website at: <http://www.cdc.gov/nchs/about/major/dvs/popbridge/popbridge.htm>.

Idaho was one of the first states to adopt a new death certificate in 2003; however, not all states adopted multiple-race options in 2003. In 2003, all records received by Idaho Vital Statistics for Idahoans who died out state reported single-race. In 2005, there were two out-of-state death certificates with multiple-races of decedent reported. Bridged-race codes are not provided to Idaho for out-of-state records; therefore not all Idaho resident records have bridged-race codes to be used for data analysis.

Idaho resident death data provided in the table on page 74 entitled "Idaho Resident Deaths by Sex, Race and Ethnicity, 2005" are based on single-race and bridged-race categories for deaths in Idaho and single-race categories for deaths out of state. There were two out-of-state deaths with multiple races listed for decedent in 2005; these records were included in the total number of deaths, but are not shown in the table.

Year	Deaths to Idaho Residents in Idaho			Deaths to Idaho Residents Out of State		
	Total	Single Race	Multiple Race	Total	Single Race	Multiple Race
2004	9,430	9,408	22	583	582	1
2005	9,954	9,931	23	559	557	2

#### Other race category

Prior to 2003, decedent's race was a write-in response on the death certificate. Races listed on the certificate were collapsed into five race categories: White, Black, American Indian or Alaskan Native, Asian or Pacific Islander, or "other race". With the change to check boxes on the certificates and the ability to select one or more race, the race category structure was revised. Prior to use of check boxes, if the term "Hispanic" or "Mexican" was written on the certificate as race, then race was coded to white. Beginning in 2003, if the check box "other race" was checked and the write-in for other race was specified as "Hispanic" or "Mexican", then race was coded to "other race". Therefore, race data for deaths in 2003-2005 are not comparable with race data prior to 2003.

Prior to 2003, the number of deaths categorized as "other race" was historically low. For example, in 2002, there were four residents deaths reported as "other race". Due to the change in the methodology, the number of records with "other race" of decedent increased from four in 2002 to 58 in 2003, 77 in 2004 and 98 in 2005.

#### **Cause-of-Death Classification**

Mortality statistics are compiled in accordance with the World Health Organization (WHO) regulations, which specify that member nations, including the United States, classify and code causes of death in accordance with the International Statistical Classification of Diseases and Related Health Problems. The tenth revision of the International Classification of Diseases (ICD-10) was implemented in the United States beginning with deaths occurring in 1999 and replaces the

ninth revision of the ICD (ICD-9), which was used from 1979 through 1998. Some changes from ICD-9 to ICD-10 include:

1. ICD-10 is far more detailed than ICD-9, with about 8,000 categories compared with 4,000 categories.
2. ICD-10 uses 4-digit alphanumeric codes, compared to 4-digit numeric codes in ICD-9.
3. Some cause-of-death titles have been changed, and conditions have been regrouped.
4. Some cause-of-death coding rules have been changed.

For more information on ICD, go to the Centers for Disease Control and Prevention website link at <http://www.cdc.gov/nchs/about/major/dvs/icd10des.htm>

## **Comparability Ratio**

The change from ICD-9 to ICD-10 in 1999 may result in discontinuities in cause-of-death trends. These discontinuities are measured using comparability ratios. NCHS developed comparability ratios to measure the level of agreement between classification systems for causes of death. Go to <http://www.cdc.gov/nchs/datawh/nchsdefs/comparabilityratio.htm> for more information regarding comparability ratios.

The comparability ratio is the result of a study completed by NCHS in which a sample of U.S. mortality records was coded by both the new (ICD-10) and the old revision (ICD-9) codes.

$$\text{Comparability ratio: } \frac{\text{Number of deaths for a cause of death based on ICD-10 code(s)}}{\text{Number of deaths for a cause of death based on the most comparable ICD-9 code(s)}}$$

To show trends in data, NCHS has instructed states to treat ICD-10 as the standard and adjust statistics prior to 1999 using Modified ICD-9 codes and comparability ratios. Therefore, mortality statistics provided in this report are NOT comparable to previously published mortality statistics based on non-modified ICD-9 codes. Idaho trend data using Modified ICD-9 codes and comparability ratios are available upon request.

## **Firearm Injury, Alcohol-Induced, and Drug-Induced Deaths**

Deaths attributed to firearm injury, alcohol-induced, and drug-induced causes are sub-sets of mortality categories used to rank leading causes of death such as accidents, intentional self-harm (suicide), and assault (homicide). Firearm injury, alcohol-induced, and drug-induced deaths are not used to rank leading cause of death.

### **Firearm Injury**

Causes of death attributable to firearm-injury deaths include ICD-10 codes: U01.4, W32-W34, X72-X74, X93-X95, Y22-Y24, and Y35.0. Firearm injury deaths include terrorism involving firearms (homicide); accidental discharge of firearms, intentional self-harm (suicide) by discharge of firearms, assault (homicide) by discharge of firearms, discharge of firearms, undetermined intent, and legal intervention involving firearm discharge. Death from injury by firearms exclude deaths due to explosives and other causes indirectly related to firearms.

### Alcohol-Induced

The list of ICD-10 codes included in alcohol-induced causes was expanded in 2003 to include the ICD-10 codes of E24.4, G72.1, and K86.0 with the codes used prior to 2003: F10, G31.2, G62.1, I42.6, K29.2, K70, , R78.0, X45, X65, and Y15. Alcohol-induced deaths include mental and behavioral disorders due to alcohol use, degeneration of nervous system due to alcohol, alcoholic polyneuropathy, alcoholic cardiomyopathy, alcoholic gastritis, alcoholic liver disease, alcohol-induced chronic pancreatitis, findings of alcohol in blood, accidental poisoning by and exposure to alcohol, intentional self-poisoning (suicide) by exposure to alcohol, poisoning by exposure to alcohol, and poisoning by exposure to alcohol, undetermined intent. Alcohol-induced deaths do not include homicides, accidents such as falls and motor vehicle crashes, and other causes indirectly related to alcohol use. This category also excludes newborn deaths associated with maternal alcohol use.

### Drug-Induced

In 2003, NCHS expanded the list of ICD-10 codes for drug-induced causes to be more comprehensive. Drug-induced ICD-10 codes include: D52.1, D59.0, D59.2, D61.1, D64.2, E06.4, E16.0, E23.1, E24.2, E27.3, E66.1, F11.0-F11.5, F11.7-F11.9, F12.0-F12.5, F12.7-F12.9, F13.0-F13.5, F13.7-F13.9, F14.0-F14.5, F14.7-F14.9, F15.0-F15.5, F15.7-F15.9, F16.0- F16.5, F16.7-F16.9, F17.0, F17.3-F17.5, F17.7-F17.9, F18.0-F18.5, F18.7-F18.9, F19.0-F19.5, F19.7-F19.9, G21.1, G24.0, G25.1, G25.4, G25.6, G44.4, G62.0, G72.0, I95.2, J70.2-J70.4, L10.5, L27.0, L27.1, M10.2, M32.0, M80.4, M81.4, M83.5, M87.1, R78.1- R78.5, X40-X44, X60-X64, X85, and Y10-Y14. Drug-induced deaths include deaths due to drug psychosis, drug dependence, nondependent use of drugs not including alcohol and tobacco, accidental poisoning by drugs, medicaments, and biologicals, suicide by drugs, medicaments, and biologicals, assault from poisoning by drugs and medicaments, and poisoning by drugs, medicaments, and biologicals, undetermined whether accidental or purposely inflicted. Drug-induced deaths do not include accidents, homicides, and other causes indirectly related to drug use. Also excluded are newborn deaths associated with maternal drug use. Types of drugs listed on the death certificate include prescriptions, over-the-counter drugs, and narcotics.

### **Life Expectancy**

Data used to calculate Idaho life expectancy are based on July 1, 2005, population estimates from the U.S. Bureau of the Census, age-specific population estimates computed by the Bureau of Health Policy and Vital Statistics, and 2005 Idaho resident mortality rates. Average number of years of life remaining ( ${}^oe_x$ ) is the expectation of life for those who survived to age x.

$${}^oe_x = T_x / l_x$$

$T_x$  is the total time lived beyond age x by all individuals of the life table proportion alive at age x;  $l_x$  is the number of persons who survive to the exact age marking the beginning of each age interval. The number alive at age 0 ( $l_0$ ) is taken arbitrarily as 100,000.

## Mortality Rates Age-Adjusted to the Year 2000 U.S. Standard

Age adjustment is a statistical technique used to standardize rates. The technique is employed when comparing two or more populations with different age distributions. Age-adjusted rates are artificial measures for comparison purposes only and should not be used to measure the absolute magnitude of a health issue. To allow for comparison, the same standard population must be used. If different standard populations are used to compute the age-adjusted rates (1940 and 2000, for example), then the age-adjusted rates are NOT comparable. Statistically, it is a weighted average of the age-specific death rates, where the weights represent the fixed population proportions by age.

There are two methods for age-adjusting rates: direct and indirect. In this report, Idaho age-adjusted rates were developed using the following steps for the direct method:

- 1) Calculate **age-specific rates** for the 11 age groups used in the 2000 standard million: less than 1, 1-4, 5-14, 15-24, 25-34, 35-44, 45-54, 55-64, 65-74, 75-84, and 85 and older.

$$\frac{(\text{Annual number of deaths in age group})}{(\text{Population of age group for corresponding year})}$$

- 2) Calculate **expected number of deaths** for each age group.

$$(\text{2000 U.S. standard million population of age group}) \times (\text{Age-specific rate})$$

- 3) Calculate **total expected number of deaths**.

$$(\text{Sum of expected deaths for all age groups})$$

- 4) Calculate **age-adjusted rate per 100,000 persons**.

$$\frac{(\text{Total expected deaths})}{(\text{Standard million})} \times 100,000$$

YEAR 2000 U.S. STANDARD POPULATION			
All ages	1,000,000	35-44 years	162,613
Under 1 year	13,818	45-54 years	134,834
1-4 years	55,317	55-64 years	87,247
5-14 years	145,565	65-74 years	66,037
15-24 years	138,646	75-84 years	44,842
25-34 years	135,573	85+ years	15,508

## Years of Potential Life Lost (YPLL)

Years of potential life lost (YPLL) is a statistic used to measure the number of years of life lost in a population when persons in that population die prematurely. YPLL provides valuable information regarding the causes of death that contribute most significantly to premature mortality. For example, in 2005, Accidents was the fifth-leading cause of death of Idahoans and accounted for 5.7 percent of all resident deaths. However, Accidents was the forth leading cause of premature death under age 75 and accounted for 20.1 percent of all YPLL in 2005.

In order to calculate YPLL, a standard must be chosen (e.g., age 75) as a reference point for years of life lost. The number of years of life lost is then calculated for each person dying before the standard age. Assume a standard of 75 years of age is chosen. For calculation purposes, all

people are considered half way through the year of their age at death. For example, an infant who dies under one year of age is considered .5 years of age at death, and a child who dies at age one - between its first and second birthday - is considered 1.5 years of age, and so forth. Therefore, a person dying at 39 has lost 35.5 years of life relative to the standard (i.e., 75 years – 39.5 years = 35.5 years). To obtain YPLL, the number of years of life lost for each person in the population dying before the standard age is summed. Persons dying at 75 years of age or older would be excluded from the analysis, because they have not lost years of life relative to the standard. For this report, a standard of 75 years of age was chosen to calculate YPLL.

## Population

The Office of Management and Budget announced revisions to the standards for classification of federal data on race and ethnicity on October 30, 1997. These standards require that agencies offer individuals the opportunity to select one or more races when reporting information on race in federal data collections. The Census in 2000 was the first nationwide implementation of the revised standards.

The files released from the U.S. Census Bureau for April 1, 2000 Census contain data for single race categories (including “other race” category) and multiple race categories. This presents problems for vital rates from two standpoints. First, the file contains counts of persons with more than one race and therefore, is not compatible with states vital statistics numerators based on single race categories; second, the file contains the “other race” category that is not used to calculate national vital statistics rates. For U.S. vital statistics “other race” is allocated to the four main race categories.

Standard Race Categories April 1, 2000 Census for Idaho		
Race	Number	Percent
Total	1,293,953	100.0%
White	1,177,304	91.0%
Black	5,456	0.4%
American Indian/Alaskan Native	17,645	1.4%
Asian	11,889	0.9%
Native Hawaiian/Pacific Islander	1,308	0.1%
Other race	54,742	4.2%
Two or more races	25,609	2.0%

NCHS contracted with the Census Bureau to produce a “bridged” data set in which all multiple race persons are allocated to a single race, to reproduce what these people would have reported had they not had the option to report more than one race. In August 2006, NCHS released state and county population estimates for July 1, 2005. These estimates are for the four race groups (White, Black, American Indian or Alaska Native, Asian or Pacific Islander, including Native Hawaiian) by single year of age, sex, and Hispanic origin.

Standard Race Categories Idaho Bridged Postcensal 2003, 2004 and 2005 Estimates						
	July 1, 2003		July 1, 2004		July 1, 2005	
Race	Number	Percent	Number	Percent	Number	Percent
Total	1,366,332	100.0%	1,393,262	100.0%	1,429,096	100.0%
White	1,316,780	96.4%	1,343,609	96.4%	1,378,040	96.4%
